## California Instruments Lx Series

### 3000-18000 VA

### 3-18 kVA Programmable AC Power Source / Analyzer

## 156-400 V

#### • Backward Compatible

Compatible with HP6834B & iL Series AC Sources Function & bus compatible with the Agilent HP6834B & California Instruments iL Series

- Three phase and Single phase modes Ideally suited for avionics and defense applications
- 3 kVA to 18 kVA Power Levels
   Match power source and cost to application requirements
- Arbitrary Waveform Generator
   Test products for harmonics susceptibility
- Built-in Power Analyzer
   Performs voltage and load current harmonic analysis and waveform acquisition
- Standard IEEE-488, USB & RS232
   Remote control interface for ATE system integration included

#### Integrated System

The Lx Series represents a modern AC power source that addresses increasing demands on test equipment to perform more functions at a lower cost. By combining a flexible AC power source with a harmonic power analyzer, the Lx Series systems are capable of handling applications that would traditionally have required multiple instruments.

The sleek integrated approach of the Lx Series avoids the cable clutter that is commonly found in AC test setups. All connections are made internally and the need for external digital multimeters, power harmonics analyzer and current shunts is completely eliminated.

Using a state of the art Digital Signal Processor in conjunction with precision A/D converters, the Lx Series provides more accuracy and resolution than can be found in most dedicated harmonic power analyzers. Since many components in the Lx Series are shared between the AC source and the power analyzer, the total cost of the integrated system is less than the typical cost of a multiple unit system.

#### **Easy To Use Controls**

The Lx Series is completely microprocessor controlled and can be operated from a simple front panel keypad. An analog control located next to the backlit alphanumeric LCD display allows output voltage and frequency to be slewed up or down dynamically. The control employs a dynamic rate change algorithm that combines the benefits of precise control over small parameter

changes with quick sweeps through the entire range. A keypad makes precise entries simple.

#### **Applications**

With precise output regulation and accuracy, high load drive current, multi or single phase mode and built-in power analyzer measurement capabilities, Lx Series AC source/analyzers address many application areas for AC power testing. Additional features, like line arbitrary waveform generation and available DO 160, MIL 704, or Airbus test standards, make the Lx Series a good choice for avionics or defense applications. All Lx Series AC sources are equipped with IEEE-488 (GPIB), USB and RS232C remote control interfaces and support SCPI command language programming. An ethernet interface option is available.

#### **HP6834B Compatibility**

The Lx Series offers functional and bus compatibility with the Agilent HP6834B AC power sources as well as the CI iL Series AC power sources and may be used in existing test systems without the need to modify program code

Standard Waveforms

The Lx Series provides three standard waveforms that are always available for output. The standard waveforms are:

- Sinewave for normal AC applications.
- Squarewave for special applications.
- Clipped Sinewave Simulates THD leveLx to test for harmonic distortion susceptibility.

In addition to these standard waveforms, user defined waveform can be downloaded over the bus

### **Lx Series**

#### Lx Series - AC Transient Generation Harmonic Waveform Generation

Using the latest DSP (Digital Signal Processing) technology, the Lx Series controller is capable of generating harmonic waveforms to test for harmonics susceptibility of a unit under test. With the help of the supplied Windows Graphical User Interface program, defining harmonic waveforms is as easy as specifying the relative amplitude and phase angle for each of up to 50 harmonics. The waveform data points are generated and downloaded by the GUI to the AC source through either IEEE-488 or RS232C bus and remain in non-volatile memory. Up to twelve waveforms can be stored and given a user defined name for easy recall.

#### **Arbitrary Waveform Generation**

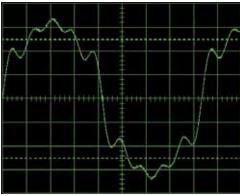

Using the provided GUI program or custom software, the user also has the ability to define arbitrary waveform data. Complex AC voltage anomalies can be simulated this way. The GUI program provides a catalog of custom waveforms and also allows real-world waveforms captured on a digital oscilloscope to be downloaded to one of the AC source's waveform memories. Downloaded waveforms are retained in non-volatile memory for recall over the bus or from the front panel. User defined waveform names make it easy to recall the desired waveform when needed.

### Lx Series - Configuration Options Transient Programming

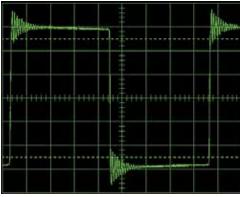

To simulate common line disturbance occurrences, the Lx Series offers a list of transient steps. These steps can be programmed from the front panel or downloaded over the interface using the GUI program supplied. The GUI allows libraries of commonly used line disturbances to be created on disk for quick recall. Once downloaded, the transient program can be executed from the PC or from the front panel. AC transient generation allows the effect of rapid changes in voltage, frequency, phase angle and waveform shape on the unit under test to be analyzed. The combination of transients and user defined arbitrary waveforms creates a powerful test platform for AC powered products.

#### Lx Series - Measurement and Analysis

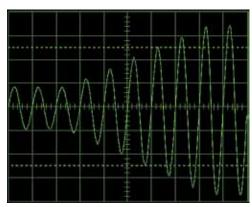

The Lx Series measurement system is based on real-time digitization of the voltage and current waveforms using a 4K sample buffer. The digitized waveform data is processed by a Digital Signal Processor to extract conventional load values such as rms voltage, rms current, real and apparent power. The same data is also used to perform Fast Fourrier Transformation (FFT) to extract the harmonic amplitude and phase angle of up to 50 harmonics.

Harmonic waveform, Fund., 3rd, 5th, 7th and 9th.

Simulation of severe ringing on the output of a UPS.

Voltage sweep transient causes output voltage to change at a programmed rate.

#### **Standard Measurements**

The following standard measurements are available from the front panel or via the bus:

- Frequency and Phase
- Voltage (rms)
- Current(rms) and Peak Current
- Crest Factor
- Neutral Current (rms)
- Real Power and Apparent Power
- Power Factor

Lx Series 3000–18000 VA

#### **Advanced Measurement Functions**

In addition to standard load parameters, the Lx Series is capable of measuring voltage and current amplitude and phase harmonics up to the 50th harmonic (for fundamental frequencies up to 250 Hz). Total harmonic distortion of both voltage and current is also available. Harmonic analysis data can be displayed on the front panel display or on the PC using the GUI program. The GUI can also be used to save and print harmonics data in tabular, bar graph or time domain formats. The acquired voltage and current timedomain waveforms for each output phase can be displayed using the GUI program. Waveform displays on the PC include voltage and current combined, three phase voltage, three phase current and true power. The time-domain data is aLxo available for transferr to a PC through IEEE-488, USB, RS232C, or Ethernet (option) when using custom software.

#### **Diagnostics Capability**

The AC Source can perform a self test and report any errors. The self test will run until the first error is encountered and terminate. The response to the self test query command will either be the first error encountered or 0 if no error was found. (Self test passed).

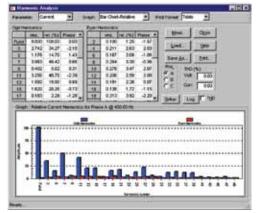

#### Windows Instrument Control Software

A Windows Vista/2000/XP<sup>TM</sup> compatible Instrument Control Software (GUI) offers a soft front panel interface for operation from a PC. The following functions are available:

- Steady state output control (all parameters).
- Create, run, save and print transient programs.
- Generate and save harmonic waveforms.
- Generate and save arbitrary waveforms.
- Download data from a digital storage oscilloscope.
- Measure and log standard measurements.
- Capture and display Voltage and Current waveforms.
- Measure, display, print and log harmonic voltage and current measurements.

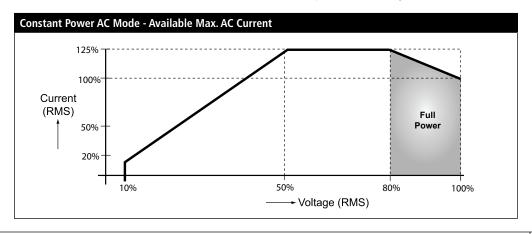

Standard measurements for all phases

Relative Current Harmonics shown in table and chart

Soft front panel control through Windows GUI.

Note: Specifications are subject to change without notice. Specifications are warranted over an ambient temperature range of 25° ± 5° C. Unless otherwise noted, specifications are per phase for a sinewave with a resistive load and apply after a 30 minute warm-up period. For three phase configurations, all specifications are for L-N. Phase angle specifications are valid under balanced load conditions only.

Lx Series 3000–18000 VA

Remote Control											
IEEE-488 Interface (option)	IEEE-488 (GPII	IEEE-488 (GPIB) talker listener. Subset: AH1, C0, DC1, DT1, L3, PP0, RL2, SH1, SR1, T6, IEEE-488.2 SCPI Syntax

### **Lx Series**

Model <sup>1</sup>	Output <b>Power</b>	No of Out	Nom. Input Voltage²	
		-1	-3	
3000Lx	3 kVA	1	3	208-230 V
3000Lx-400	3 kVA	1	3	400 V
4500Lx	4.5 kVA	1	3	208-230 V
4500Lx-400	4.5 kVA	1	3	400 V
6000Lx	6 kVA	1	3	208-230 V
9000Lx/2	9 kVA	1	3	208-230 V
9000Lx/2-400	9 kVA	1	3	400 V
12000Lx/2	12 kVA	1	3	208-230 V
13500Lx/3	13.5 kVA	1	3	208-230 V
13500Lx/3-400	13.5 kVA	1	3	400 V
18000Lx/3	18 kVA	1	3	208-230 V

Note 1: The /2 or /3 designation indicates number of chassis.

Note 2: All input voltage specifications are for Line to Line three phase, delta or wye. Model 3000Ls (208 V input) can be operated on 230 V L-N single phase if needed.

HF Table Model	Max. Freq.
3000Lx	5000 Hz
4500Lx	5000 Hz
6000Lx	5000 Hz
9000Lx/2	2000 Hz
12000Lx/2	2000 Hz
13500Lx/3	2000 Hz
18000Lx/3	2000 Hz

Ordering Information Model Refer to table shown for model numbers and configurations. Specify number of output phases (-1 or -3) as part of model number, eg 4500Lx-1 or 4500Lx-3.		-ABD	Airbus Directive 0100.1.8 tests. [AC only]. Requires -ADV and use of Windows PC and included LxGui software.
		-AMD	Airbus AMD24 Test
		-A350	Airbus Test Software
<b>Supplied with</b> User / Programming Manual on CD-ROM,		-AIRB	Airbus A380, A350 & AMD24 package
Software	e and RS232C serial cable.	-ABL	Emulates Elgar SL Series
Options		-B787	Boeing 787 Test Software
Input <b>O</b>   -400	400 ±10% Volt Line to Line AC input Includes CE Mark. [Not available on 6000Ls, 12000Ls and 18000Ls Models]	-ADV	Advanced feature set. Adds arbitrary waveform generation and harmonic analysis of voltage and current.
-480	480 ±10% (3 phase output only)	-GPIB	GPIB interface and APE programming language.
Output -AX	<b>Options</b> Auxiliary outputs, 26 VAC, 5 VAC.	-LAN	Ethernet Interface.
-A/\	Limits upper frequency to 800 Hz.	-MB	Multi-box. Adds controller to auxiliary
-EHV	200/400 V output range.		chassis of multi-chassis systems.
-HF	Extends upper frequency limit.	-MODE	Add phase mode selection for 3 models
	See HF table.	-L22	Locking Knobs.
-LF	Limits output frequency to 500 Hz.	-LKM	Clock and Lock Master
Keypad	Options	-LKS	Clock and Lock Auxiliary

-RP LS style rotary knobs

#### **Cabinet Options**

-RMS	Rackmount Slides. Recommended for
	rack mount applications.

C prefix Cabinet System. Installed and pre-wired in 19" cabinet.

#### **Controller Options**

-160 RTCA/DO-160, Change 2, EuroCAE-14D [Section 16, AC only]

-704F Mil-Std 704 rev A - F

-704 Mil-Std 704 rev D and E test firmware. [AC only]
