# **California Instruments BPS Series**

30-180 kVA

#### **Overview**

## 150–400 V

### • High Power AC Source

Programmable AC power for frequency conversion and product test applications

#### • Expandable Power Levels

Available output power of 30, 45, 75 and 90 kVA per unit and multi-unit configurations for power requirements up to 180 kVA and above

#### • Remote Control

Standard RS232, USB and IEEE-488 (GPIB) and optional LAN interfaces are available for automated test applications.

ETHERNET USB GPIB R\$232

#### Introduction

The BPS Series consists of multiple high power AC power systems that provide controlled AC output for ATE and product test applications.

This high power AC test system covers a wide spectrum of AC power applications at an affordable cost. Using state-of-the-art PWM switching techniques, the BPS Series combines compactness, robustness and functionality in a compact floor-standing chassis, no larger than a typical office copying machine. This higher power density has been accomplished without the need to resort to elaborate cooling schemes or additional installation wiring. Simply roll the unit to its designated location (using included casters), plug it in, and the BPS Series is ready to work for you.

#### **Simple Operation**

The BPS Series can be operated completely from its menu driven front panel controller. A backlit LCD display shows menus, setup data, and read-back measurements. IEEE-488, RS232C, USB and LAN remote control interfaces and instrument drivers for popular ATE programming environments are available. This allows the BPS Series to be easily integrated into an automated test system.

#### Configurations

The BPS is capable of delivering 30, 45, 75, 90, 150 or 180kVA of AC power. The 30 and 45kVA models come as dedicated single or three phase output while the 75, 90, 150 and 180kVA models are dedicated three phase.

For higher power requirements, simply parallel the BPS in multi-cabinet configuration. Multi cabinet systems always operate in three phase output mode commonly found in power systems.

#### **Product Evaluation and Test**

Increasingly, manufacturers of high power equipment and appliances are required to fully evaluate and test their products over a wide range of input line conditions. The built-in output transient generation and read-back measurement capability of the BPS Series offers the convenience of a powerful, and easy to use, integrated test system.

#### **Avionics**

With an output frequency range to 819 Hz, the BPS Series is well suited for aerospace applications. Precise frequency control and accurate load regulation are key requirements in these applications. The available remote control interfaces and SCPI command language provide for easy integration into existing ATE systems. The BPS Series eliminates the need for several additional pieces of test equipment, saving cost and space. Instrument drivers for popular programming environments such as National Instruments LabView<sup>TM</sup> are available to speed up system integration.

#### Choice of voltage ranges

Standard voltage ranges are 150V L-N (259V L-L) and 300V (519V L-L) and are direct coupled output.

For applications requiring more than 300V L-N (or 519V L-L), the optional -HV output transformer provides a third additional 400V L-N and 693 V L-L output range which is internal to the AC chassis. No external magnetics modules are required.

#### **Multi-Box Configurations**

For high power applications, two BPS75 or BS90 chassis can be combined to provide 150kVA or 180kVA of output power. For higher power requirement please contact sales for custom configurations.

AMETEK Programmable Power 9250 Brown Deer Road San Diego, CA 92121-2267 USA

### **BPS Series**

#### Simple transition from R&D to Manufacturing.

The California Instruments Mx and RS Series are high performance, feature rich Research and Development solutions. That level of advanced performance is not always required in production and lab environments. Since the BPS shares common code structure and performance characteristics as the Mx and RS the BPS is ideally suited to easily transition into cost effective production solutions.

#### **High Crest Factor**

With a crest factor of up to 4.5, the BPS Series AC source can drive difficult nonlinear loads with ease. Since many modern products use switching power supplies, they have a tendency to pull high repetitive peak currents.

#### **Remote Control**

Standard RS232, USB and IEEE 488 (GPIB) along with optional LAN remote control interfaces allow programming of all instrument functions from an external computer. The popular SCPI command protocol is used for programming.

#### **Application Software**

Windows® application software is included. This software provides easy access to the power source's capabilities without the need to develop any custom code. The following functions are available through this GUI program:

- Steady state output control (all parameters)
- Create, run, save, reload and print transient programs
- Measure and log standard measurements
- Capture and display output voltage and current waveforms.
- Measure standard power measurements..
- Display IEEE-488, RS232C, USB and LAN bus traffic to and from the AC Source to help you develop your own test programs.

#### **BPS Series - AC Transient Generation**

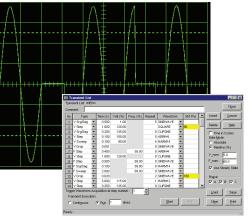

The BPS Series controller has a powerful AC transient generation system that allows complex sequences of voltage and frequency to be generated. This further enhances the BPS's capability to simulate AC line conditions and disturbances. Transient generation is controlled independently yet time synchronized on all three phases. Accurate phase angle control and synchronized transient list execution provide unparalleled accuracy in positioning AC output events.

Transient programming is easily accomplished from the front panel where clearly laid out menu's guide the user through the transient definition process.

The front panel provides a convenient listing of the programmed transient sequence and allows for transient execution Start, Stop, Abort and Resume operations. User defined transient sequences can be saved to non-volatile memory for instant recall and execution at a later time. The included Graphical User Interface program supports transient definitions using a spreadsheet-like data entry grid. A library of frequently used transient programs can be created and saved using this GUI program.

Transient List Data Entry from the front panel.

Transient List Data Entry in GUI program.

BPS Series 30–180 kVA

#### **BPS Series - Measurement and Analysis**

The BPS Series is much more than a programmable AC power source. It also incorporates an advanced digital signal processor based data acquisition system that continuously monitors all AC source and load parameters. This data acquisition system forms the basis for all measurement and analysis functions. These functions are accessible from the front panel and the remote control interface for the BPS Series.

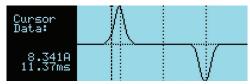

#### **Conventional Measurements**

Common AC measurement parameters are automatically provided by the data acquisition system. These values are displayed in numeric form on the front panel LCD display. The following measurements are available: Frequency, Vrms, Irms, Ipk, Crest Factor, Real Power (Watts), Apparent Power (VA) and Power Factor.

#### **Waveform Acquisition**

The measurement system is based on real-time digitization of the voltage and current waveforms using a 4K deep sample buffer. This time domain information provides detailed information on both voltage and current waveshapes. Waveform acquisitions can be triggered at a specific phase angle or from a transient program to allow precise positioning of the captured waveform with respect to the AC source output.

The front panel LCD displays captured waveforms with cursor readouts. The included GUI program also allows acquired waveform data to be displayed, printed, and saved to disk.

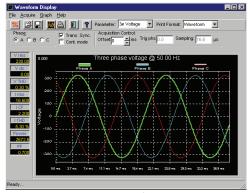

Acquired Current waveform (BPS Display).

Measurement data for single phase (BPS Display).

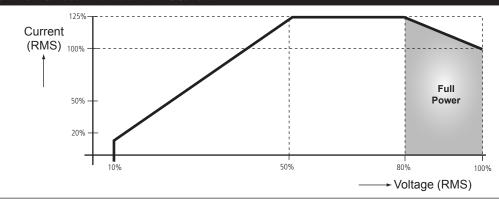

Measurement data for all three phases (BPS Display).

Acquired three phase voltage waveforms display on PC.

# **BPS Series**

#### Supplied with

Standard: User/Programming Manual and Software on CD ROM. RS232C serial cable.

#### **Input Voltage Settings**

Specify input voltage (L-L) setting for each BPS system at time of order:

- 208 Configured for 208 V  $\pm$ 10 % L-L, 4 wire input.
- 230 Configured for 230 V  $\pm$ 10 % L-L, 4 wire input.
- 400 Configured for 400 V  $\pm$ 10 % L-L, 4 wire input.
- 480 Configured for 480 V  $\pm$ 10 % L-L, 4 wire input

#### **Standard Model Options**

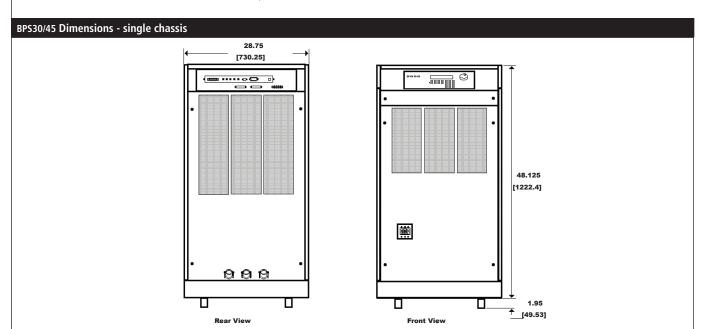

- LF Limits maximum frequency to 500 Hz.

-LAN Ethernet Interface.

-HV Adds 400 V L-N AC-only output range.

#### **Packaging and Shipment**

All BPS systems are packaged in re-usable protective wooden crates for shipment.

#### BPS75/90 Dimensions - single chassis
