AMP 200N1 - LOW-FREQUENCY SIGNAL SOURCE FOR SUPPLY SIMULATION AND MAGNETIC FIELD TESTING

The AMP 200N1 has been designed as a low-frequency signal source to generate sinusoidal signals used to simulate ripple noise and ground shift noise as required by a variety of standards in the avionics, military and automotive industry.

The AMP 200N1 is controlled by either the NetWave (for testing avionics, military and nautic standard requirements, e.g. German Lloyd VI-7-2) the AutoWave for automotive testing such as e.g. Ford EMC-CS-2009.1. Additionally, the AMP 200N1 can be used to generate magnetic fields by means of a radiation loop or small Helmholtz coils as per various standards.
