Description

The HP 8753B provides excellent RF network measurements for the lab and production test areas. When combined with a test set, it yields a complete solution for characterizing the linear behavior of either active or passive networks, devices, or components from 300 kHz to 6 GHz. With two independent display channels available, you can simultaneously measure and display the reflection and transmission characteristics of the device under test in overlay or split screen format. The easy-to-use softkey selection of measurement functions allows you to measure the magnitude, phase, or group delay characteristics of your device under test.

The test sequence function allows rapid and consistent execution of complex repetitive tests with a single keystroke. In sequencing mode, you make the measurement once from the front panel and the instrument "learns" the keystrokes so no additional programming expertise is required. You can even set other HP-IB instruments via a test sequence. Other productivity enhancements include a plot/print buffer, limit testing, arbitrary frequency testing, and marker tracking functions. Finally, segmented calibration and interpolative error correction allow you to apply vector accuracy enhancement over a subset of the frequency range that you initially calibrated the HP 8753B.

The HP 8753B's integrated synthesized source provides > 100 mW of output power, 1 Hz frequency resolution, and linear, log, list, power, and CW sweep types. Three tuned, 300 kHz to 3 GHz (Option 006 - extends to 6 GHz) receivers allow versatile independent power measurements or simultaneous ratio measurements over a 100 dB dynamic range. By employing the HP 83047A Test Set with the HP 8753B, the reflection and transmission characteristics of the device under test can be investigated from 300 kHz to 3 GHz or from 3 MHz to 6 GHz with the test set's frequency doubler enabled.

Non-linear Device Testing

Non-linear device characterization is possible with the HP 8753B. Sweep 2nd and 3rd harmonic levels of an amplifier can be displayed directly or relative to the fundamental carrier (dBc) when employing the optional harmonic measurement capability (Option 002). Amplifier harmonics up to 40 dBc can be measured quickly and conveniently on a swept-frequency basis for fundamental signals as low as 16 MHz, using the same test configuration used to measure gain. Power meter calibration provides a leveled absolute power to devices that are sensitive to absolute input or output levels. The HP 8753B automatically controls an HP 436A, 437B, or 438A Power Meter to set the power anywhere in the test configuration with power meter accuracy.

The HP 8753B has the capability to perform mixer tracking and conversion loss measurements. These are possible because the HP 8753B's tuned receiver can be offset from it's synthesized source by the LO frequency of the mixer.

Time Domain Analysis

Time domain responses can be displayed by the HP 8753B with Option 010. The instrument computes the inverse Fourier Transform of the frequency domain data to display the reflection or transmission coefficient versus time. The HP 8753B offers two time domain modes. The Low Pass mode provides the traditional Time Domain Refle-ctometer (TDR) measurement capability and gives the response of the network to a mathematically simulated step or impulse response. This mode gives information of the type of impedance (R, L, C) at the discontinuity. The Band Pass time domain mode, which has only the impulse stimulus, has no frequency restrictions and provides the time domain response of frequency selective devices such as SAW filters or antennas. Gating may be used to selectively isolate a single response to view the frequency domain response of individual portions of a component without disturbing the circuit itself.

Model 8753B

HP 8753B Specifications Summary

Source
Frequency Characteristics
Frequency Range: 300 kHz to 3 GHz
Frequency Resolution: 1 Hz
Frequency Accuracy (25°C): ±10 ppm
Output Characteristics
Power Range: -5 to +20 dBm
Power Accuracy (50 MHz, +10 dBm): ±0.5 dB
Power Linearity (relative to +10 dBm, 25°C):
-5 to +15 dBm: ±0.2 dB
+15 to +20 dBm: ±0.5 dB
Impedance: 50
Harmonics:
-25 dBc (20 dBm output level)
Nonharmonics:
Mixer Related: ≤ -32 dBc (20 dBm output level)
Other Spurious:
-135 MHz: -90 dBc
≤ 135 MHz: -90 dBc + 20 log (f/135 MHz)
Phase Noise (0.01 Hz offset in 1 Hz BW):
-135 MHz: -90 dBc
≤ 135 MHz: -90 dBc + 20 log (f/135 MHz)

Receiver
Frequency Range: 300 kHz to 6 GHz
Inputs: A, B 100 dB dynamic range <3 GHz
95 dB dynamic range 3 to 6 GHz
Sensitivity (noise level):
3 kHz BW: -90 dBm <3 GHz, -85 dBm 3 to 6 GHz
10 kHz BW: -100 dBm <3 GHz, -95 dBm 3 to 6 GHz
Maximum Input Level: 0 dBm
Impedance: 50
Input Crosstalk:
300 kHz to 1 GHz: -100 dB
1 GHz to 3 GHz: -90 dB
3 GHz to 6 GHz: -90 dB
Dynamic Accuracy: ±0.05 dB, ±0.5 degree over a 50 dB input range
Delay Characteristics:
Range: 1/2" (1/minimum aperture)
Aperture: selectable (frequency span)/(# points -1) to 20% of the frequency span
Resolution: 27.8/#aperture in Hz
Typically 0.01 nanoseconds
Accuracy: (phase accuracy)/(360/#aperture in Hz)
Dimensions:
178mm H x 425mm W x 498mm D
(7.0 x 16.7 x 19.6 in)
Weight:
Net 22 kg (48 lb); Shipping 25 kg (55 lb)

HP 8753B Accessories
HP 85044A 50 Ohm Transmission/Reflection Test Set
HP 85044B 75 Ohm Transmission/Reflection Test Set

The HP 85044 A/B Transmission/Reflection test sets provide the capability to simultaneously measure the impedance and transmission characteristics of 50 and 75 ohm devices. Two-port devices must be physically turned around to measure their reverse direction characteristics. Test port connectors are precision 7 mm and 75 ohm type N (f), respectively.

Specifications: HP 85044A HP 85044B
Impedance: 50 ohms 75 ohms
Frequency Range: 300 kHz to 3 GHz 300 kHz to 2 GHz
Directivity: 35 dB to 1.3 GHz 35 dB to 1.3 GHz
20 dB to 2.0 GHz

Typical Tracking:
HP 85044A HP 85044B
Transmission Magnitude, Phase:
3 MHz to 2.0 MHz ±1.5 dB, ±10° ±1.5 dB, ±10°
2.0 MHz to F<sub>max</sub> ±1.5 dB, ±10° ±1.5 dB, ±10°
Reflection Magnitude, Phase:
3 MHz to 2.0 MHz ±1.5 dB, ±25° ±1.0 dB, ±25°
2.0 MHz to F<sub>max</sub> ±1.5 dB, ±10° ±1.0 dB, ±10°
Effective Source Match:
3 MHz to 2.0 MHz 14 dB 14 dB
2.0 MHz to 1.3 GHz 20 dB 17 dB
1.3 GHz to F<sub>max</sub> 16 dB 16 dB

RF Connectors:
Test Ports:
- precision 7 mm 75 ohm type N (f)
All others:
50 ohm type N (f) 50 ohm type N (f)
Includes:
HP 85044A—one precision 7 mm to 50 ohm type N (f) adapter;
HP 85044B—one HP 8753B minimum loss pad.
Recommended Accessories:
HP 85044B 11851B RF cable kit
Dimensions: 615H x 101 W x 204 mm D
(2.44 x 7.5 x 8.0 in)
Weight:
not 1.7 kg (3.8 lb)

S-Parameter Test Sets
The S-parameter test sets provide the capability to measure impedance and transmission characteristics (including s-parameters) of 2 port devices in either direction with a single connection. The test sets are controlled from the HP 8753B and include a programmable step attenuator.

HP 85046A/B S-Parameter Test Set
Test port connectors are precision 7 mm and 75 ohm type N (f) respectively. Both connectors can be adapted to other interfaces with the appropriate precision adapters.

Specifications: HP 85046A HP 85046B
Impedance: 50 ohms 75 ohms
Frequency Range: 300 kHz to 3 GHz 300 kHz to 2 GHz
Directivity: 35 dB to 1.3 GHz 35 dB to 1.3 GHz
20 dB to 2.0 GHz
Typical Tracking:
Transmission Magnitude, Phase:
3 MHz to 2.0 MHz ±1.5 dB, ±10° ±1.5 dB, ±10°
2.0 MHz to F<sub>max</sub> ±1.5 dB, ±10° ±1.5 dB, ±10°
Reflection Magnitude, Phase:
3 MHz to 2.0 MHz ±1.5 dB, ±25° ±1.5 dB, ±25°
2.0 MHz to F<sub>max</sub> ±1.5 dB, ±10° ±1.5 dB, ±10°
Effective Source Match:
3 MHz to 2.0 MHz 14 dB 14 dB
2.0 MHz to 1.3 GHz 20 dB 17 dB
1.3 GHz to F<sub>max</sub> 16 dB 16 dB
RF Connectors:
Port 1, 2:
- precision 7 mm 75 ohm type N (f)
All others:
50 ohm type N (f) 50 ohm type N (f)
Includes:
Four 190 mm (7.5") cables with type N (f) connectors for connection to the HP 8753B. One HP 8753B test set interconnect cable.
Recommended Accessories:
HP 85047D cables HP 85075B cables
Dimensions: 90 x 9 x 92 W x 553 mm D
(3.5 x 16.7 x 21.5 in)
Weight:
9.1 kg (20 lb)

1°Degrees, specified as deviation from linear phase.
2°Measurable only for the frequencies specified in the test set.
3°Can be improved through Acuity Achievement.
Network Analyzers
Accessories
8753B Series

HP 85047A S-parameter Test Set
This test set includes a frequency doubler that can be switched in to measure 3 MHz to 6 GHz in a single sweep or switched out to measure 300 kHz to 3 GHz in a single sweep. The HP 8753B controls the frequency doubler. HP 8752B Option 006 (6 GHz receiver) is required to activate the HP 85047A. There are two rear panel BNC outputs. One provides a TTL signal which indicates the result of HP 8753B Test Sequence function.

Specifications
Impedance: 50 ohms
Frequency ranges: 300 kHz to 3 GHz
Directivity: 3 MHz to 6 GHz
1.3 GHz to 3 GHz 20 dB
3 GHz to 6 GHz 25 dB

Typical tracking:
Transmission magnitude, phase:
300 kHz to 3 GHz ±1.5 dB, ±10 deg.
3 GHz to 6 GHz ±3.5 dB, ±20 deg.
Reflection magnitude, phase:
300 kHz to 3 GHz ±1.5 dB, ±10 deg.
3 GHz to 6 GHz ±1.5 dB, ±20 deg.

Effective source match: 300 kHz to 3 GHz 20 dB
1.3 GHz to 3 GHz 16 dB
3 GHz to 6 GHz 14 dB

RF connectors:
Port 1, 2: 7 mm precision
All others: 50 ohm type N(f)

Includes: Four 190 mm (7.5") cables with Type N(r) connectors for connection to the HP 8753B. One HP 8753B test set interconnect cable.

Recommended accessories: HP 11857D cables
Dimensions: 90 H x 426 W x 533 mm D
Weight: 10 kg (22 lbs)

HP 11850C/D Three-Way Power Splitters

Specifications
HP 11850C HP 11850D
Impedance: 50 ohms
Frequency Range: DC to 1 GHz DC to 2 GHz
Tracking: ±25 dB, ±3° ±2 dB, ±2.5°
Equivalent Source Match:
Tractive at 1.3 GHz 30 dB @ 1.3 GHz 30 dB @ 1.3 GHz
Insertion Loss: 20 dB @ 1.3 GHz 20 dB @ 3 GHz
Nominal Insertion Loss:
9.5 dB @ 1 dB/GHz 7.5 dB
Input Port Match:
DC to 1.3 GHz 20 dB 20 dB
1.3 GHz to 1 max' 10 dB 10 dB
RF Connectors:
RF Input: 50 ohm type N (f) 50 ohm type N (f)
All Others: 50 ohm type N (f) 75 ohm type N (f)
Includes: 3 ea HP 11852B 50 to 75 ohm

Recommended accessories: HP 11851B RF Cable Kit

HP 11851B RF Cable Kit

General:
Three 610 mm (24 in.) 50 ohm cables phase matched to 4° at 1.3 GHz and one cable 600 mm (34 in.) Connectors are Type N Male. Recommended for use with HP 85044A/B Transmission/Reflection Test Set and HP 11850C/D Power Splitter.
Weight: 0.21 kg (0.5 lb) shipping, 1.36 kg (3 lb)

HP 11852B 50 75 Minimum Loss Pad
General:
The HP 11852B is a low SWR minimum loss pad required for transmission measurements on 75 ohm devices with HP 8753B receiver (50 ohm).
Frequency range: dc to 2.0 GHz
Insertion loss: 5.7 dB
Return loss: 75 Ω typically ≥30 dB, 50 Ω typically ≥26 dB
Maximum input power: 250 mW (+24 dBm)
Connectors: 50 ohm Type N female and 75 ohm Type N male.

Type N Accessory Kits

Kit contains a Type N Female short, Type N Male short, two Type N Male barrels, two Type N Female barrels and storage case.

HP 11853A 50 Type N Accessory Kit
General: The HP 11853A furnishes the RF components required for measurement of devices with 50 ohm Type N Connectors using the HP 8753B, 85044A, 85046A or 85047A.

HP 11855A 75 Type N Accessory Kit
General: The HP 11855A provides the RF connecting hardware generally required for measurement of devices with 75 ohm Type N Connectors using the HP 85044B, 85046B or 11855D. This kit also contains a 75 ohm Type N Male termination.

BNC Accessory Kits
Kit contains two Type N Male to BNC Female adapters, two Type N Male to BNC Male adapters, two Type N Female to BNC Female adapters, two Type N Female to BNC Male adapters, a BNC Male short and storage case.

HP 11854A 50 BNC Accessory Kit
General: The HP 11854A furnishes the RF components required for measurement of devices with 50 ohm BNC Connectors using the HP 8753B, 85044A, 85046A or 85047A.

HP 11856A 75 BNC Accessory Kit
General: The HP 11856A provides the RF connecting hardware generally required for measurement of devices with 75 ohm BNC Connectors using the HP 85044B, 11855D, or 85046B. This kit also contains a 75 ohm BNC Male termination, and storage case.

HP 11857D 50 APC-7 Test Port Extension Cables
General: two precision 61 cm (24 in.) cables, phase matched to 2° at 1.3 GHz for use with HP 85044 A S-Parameter test set. Connectors are 50 ohm APC-7.

HP 11857B 75 Type N Test Port Extension Cables
General: two precision 61 cm (24 in.) cables, phase matched to 2° at 1.3 GHz for use with HP 85046B S-Parameter test set. One cable has 75 ohm Type N Male connectors on both ends; the other has one Type N Male and one Type N Female connector.

HP 11600B/11602B Transistor Fixtures
Function: mounts on front of HP 8745A S-Parameter Test Sets, holds devices for s-parameter measurements in a 50 ohm coax circuit.

Transistor Base Patterns
Model 11600B: accepts TO-18/TO-72 packages.
Model 11602B: accepts TO-5/TO-12 packages.
Calibration references: short circuit termination at a 50 ohm through-section.
Frequency range: dc to 2 GHz
Impedance: 50 ohm nominal.
Reflection coefficient: <0.05, 100 MHz to 1.0 GHz: <0.09, 1.0 to 2 GHz.
Connectors: hybrid APC-7: Option 001, Type N female.

HP 11858A Transistor Fixture Adapter
General: the HP 11858A adapts the HP 11600B and 11602B transistor fixtures (vertical test port configuration) to the HP 85046A or 85047A S-parameter test set. Connectors are APC-7.

HP 85043B Systems Cabinet
The HP 85043B systems cabinet has been ergonomically designed specifically for the HP 8753B and the HP 85046A/B or 85047A S-parameter test sets. The 122 cm (48") system cabinet includes a bookcase, a drawer, and a convenient work surface.

Calibration Kits
Accuracy enhancement procedures characterize the systematic errors of the measurement system by measuring known devices (standards) on the system over the frequency range of interest. The calibration kits in the HP 8753B family contain precision standards with which to characterize the systematic errors of a HP 8753B measurement system.

HP 85031B 7 mm Calibration Kit
The HP 85031B 7 mm calibration kit contains a set of precision 7 mm fixed terminations, an open circuit, and a short circuit used to calibrate the HP 8753B and its 50 ohm test sets for measurement of devices with precision 7 mm connectors.
NETWORK ANALYZERS

Accessories (cont’d)

8753B Series

HP 85032B 50 Ω Type N Calibration Kit

The HP 85032B Calibration Kit contains precision 50 Ω type N standards used to calibrate the HP 8753B and its 50 Ω test sets for measurement of devices with 50 Ω type N connectors. Precision phase-matched 7 mm to 50 Ω type N adapters are included for accurate measurements of non-insertable devices. Standards include fixed terminations, open circuits, and short circuits.

HP 85033C 3.5 mm Calibration Kit

The HP 85033C Calibration Kit contains precision 3.5 mm standards used to calibrate the HP 8753B and its 50 Ω test sets for measurement of devices with 3.5 mm and SMA connectors. Standards include fixed terminations, open circuits, and short circuits. Precision 7 mm to 3.5 mm adapters are included for accurate measurements of non-insertable devices.

HP 85036B 75 Ω Type N Calibration Kit

The HP 85036B Calibration Kit contains precision 75 Ω type N standards used to calibrate the HP 8753B and its 75 Ω test sets for measurement of devices with 75 Ω type N connectors. Standards include fixed terminations, open circuits, and short circuits. Precision phase-matched adapters are included for accurate measurements of non-insertable devices.

Verification Kits

Measuring known devices, other than the calibration standards, is a convenient way of verifying that the HP 8753B measurement system is operating properly.

HP 85029B 7 mm Verification Kit

The HP 85029B Verification Kit contains a set of precision 7 mm devices, with data traceable to NBS, used to verify the calibration performance of an HP 8753B measurement system. The devices have precision 7 mm connectors and include a 26 dB pad, a 50 dB pad and a mismatch attenuator. Verification process requires only an HP 85031B calibration kit, an HP 85029B verification kit and an external 3.5 mm disc drive connected to the HP 8753B.

Software

Software operates with a BASIC operating system using an HP Series 300 computer (2 megabytes of memory required).

HP 85160A Measurement Automation Software

Measurement Automation Software simplifies device measurements by providing guided measurements, limit testing, sequencing to test all four S-parameters, data formatting flexibility (data files can be formatted to be compatible with Touchstone linear circuit simulation programs) and complete save/reload capability to a floppy disk. Once configured, simply recall a test file and calibration data, connect the device-under-test, and output the results.

HP 85165A Resonator Measurement Software

Resonator Measurement Software performs complete characterization of crystals, SAWs, and other resonant devices using the HP 8753B. The software guides the user through the measurement process and calculates key parameters of the device under test according to the EIA-512 resonator measurement standard.

HP 85024A High Frequency Probe

The HP 85024A High Frequency Probe makes it easy to perform in-circuit measurements. An input capacitance of only 0.1 pF shunted by 1 Megohm of resistance permits high frequency probing without adversely loading the circuit under test. Excellent frequency response and unity gain guarantees high accuracy in swept measurements with this probe. High probe sensitivity and low distortion levels allow measurements to be made while taking advantage of the full dynamic range of HP RF analyzers. Spectrum analyzers which supply probe power from the front panel include the HP 8568B, 8590A, 8562A/B, and 71100A. RF network analyzers like the HP 8753B, 3577A, and 4195A are also directly compatible. You can use the HP 85024A with other instruments by using the HP 1122A Probe Power Supply or any dual ± 15V, 130 mA supply.

HP 85024A

Specifications

Input Capacitance (@ 500 MHz): <0.7 pF (nominal)
Input Resistance: 1 Megohm (nominal)
Bandwidth: 300 kHz to 3 GHz
Gain (@ 500 MHz): 0 dB ± 1 dB
Average Noise Level (10 Hz to 10 MHz): <1 mV
Frequency Response: ±1.25 dB (300 kHz to 1 GHz)
+2 to -3 dB (1 GHz to 3 GHz)
Input Voltage for 1 dB Compression: 0.3 V
Supplemental Characteristics
Noise Figure: <50 dB (<10 MHz)
<25 dB (100 MHz to 3 GHz)
Distortion (@ 0.3 V): <30 dB

Includes

Type N Male Adapter, 10:1 Divider, Spare probe tips, 2.5-inch Ground Lead, Hook Tip, Spanner Tip, and Probe Tip Nut Driver.

Service and Support Products

Service and support products are available for HP 8753B measurement systems. On-site support products require a specific 50 ohm two-port measurement configuration. Contact your local HP sales office for availability and price.
