Introduction

Standard Agilent Technologies ESG family RF signal generators incorporate a broad array of capabilities for testing both analog and digital communications systems. Adding flexible options provides a test solution that will evaluate the performance of a communication system to the requirements of nearly all current and proposed air interface standards. Many test functions can be customized to meet the needs of proprietary and other nonstandard wireless protocols as well. You can configure your instrument to address a wide variety of tests—from altering nearly every aspect of a digital signal or signal operating environment, to creating experimental signals. This flexibility, along with an architecture that accepts future enhancements makes the ESG family an excellent choice for wireless communications system testing now and in the future.

ESG family of RF signal generators

The family consists of four series:

ESG-A series: analog instruments
   E4400B, E4420B, E4421B, E4422B

ESG-AP series: analog instruments with high spectral purity
   E4423B, E4424B, E4425B, E4426B

ESG-D series: digital and analog instruments
   E4430B, E4431B, E4432B, E4433B

ESG-DP series: digital and analog instruments with high spectral purity
   E4434B, E4435B, E4436B, E4437B

Please refer to the related literature in the section ESG family application and product information for additional information.

Key standard features for entire family

- Expandable architecture
- Broad frequency coverage
- Choice of electronic or mechanical attenuator
- Superior level accuracy
- Wideband FM and φM
- Step sweep (frequency, power and list)
- Built-in function generator
- Lightweight, rack-mountable
- 3-year warranty
- 2-year calibration cycle

Standard features only in the digital series

- Broadband analog I/Q inputs
- I/Q adjustment capabilities and internal calibration
- Excellent modulation accuracy and stability
- Coherent carrier output

Options available only with the digital series

- Built-in dual arbitrary waveform generator
- Multichannel, multicarrier CDMA personality
- Multichannel, multicarrier W-CDMA 1.0 personality
- Multichannel cdma2000 personality
- Real-time 3GPP W-CDMA personality
- Real-time cdma2000 personality
- Real-time EDGE personality
- Internal bit-error-rate analyzer
- Versatile timeslot, data and burst generation
- Adjustable symbol rates, filter factors and burst shape
- Digital modulation formats for DECT, GSM, NADC, PDC, PHS, and TETRA

Options available only with the analog series

- High-performance pulse modulation
## Specifications for analog and digital models

### Frequency

<table>
<thead>
<tr>
<th>Range</th>
<th>ESG-A series</th>

</tbody>
</table>

### Typical maximum available power

![Graph](image)

---

1. To within 0.1 ppm of final frequency above 250 MHz or within 100 Hz below 250 MHz.
2. With high performance pulse modulation (Option 1E6) installed, all maximum power specifications drop by 4 dB.

Specifications describe the instrument’s warranted performance and apply after a 45 minute warm-up. All specifications are valid over the signal generator’s entire operating/environmental range while in phase noise mode 2, unless otherwise noted. Supplemental characteristics, denoted typical or nominal, provide additional (nonwarranted) information useful in applying the instrument.
## Resolution
0.02 dB

1. For 23 °C ±5 °C. Accuracy degrades by 0.02 dB/°C over the full temperature range and by 0.3 dB above +7 dBm (degraded by 0.5 dB above +10 dBm with Option UNB).

2. Level accuracy specification maintained only with return to calibration.

4. Refer to frequency bands on page 4 to compute specifications.

5. Performance is typical for spurs at frequencies above the maximum operating frequency of the instrument. Performance typically is –60 dBc between 225 and 249.999 MHz.

6. Specifications apply for FM deviations <100 kHz and are not valid for FM.

7. For non-constant amplitude digital formats, unspecified spur levels occur up to the second harmonic of the baseband rates.

---

**Notes:**

- For 23 °C ±5 °C. Accuracy degrades by 0.02 dB/°C over the full temperature range and by 0.3 dB above +7 dBm (degraded by 0.5 dB above +10 dBm with Option UNB).
- Level accuracy specification maintained only with return to calibration.
- Parentheses denote typical performance.
- Refer to frequency bands on page 4 to compute specifications.
- Performance is typical for spurs at frequencies above the maximum operating frequency of the instrument. Performance typically is –60 dBc between 225 and 249.999 MHz.
- Specifications apply for FM deviations <100 kHz and are not valid for FM.
- For non-constant amplitude digital formats, unspecified spur levels occur up to the second harmonic of the baseband rates.
- Specifications apply for CW mode only.
Characteristic SSB phase noise for ESG-AP and ESG-DP series

- $f_c = 100$ MHz (CW, standard instrument)
- $f_c = 500$ MHz (CW, standard instrument)
- $f_c = 1$ GHz (CW, standard instrument)
- $f_c = 2$ GHz (CW, standard instrument)
- $f_c = 4$ GHz (CW, standard instrument)
- $f_c = 900$ MHz (CW and I/Q modulation on)
- $f_c = 1.8$ GHz (CW and I/Q modulation on)

<td>dc to 1 kHz</td>
<td>dc to 1 MHz</td>
</tr>
</tbody>
</table>

**Deviation accuracy**

<±(5% of deviation + 0.01 radians)

(1 kHz rate, Normal BW mode)

**Distortion**

<1%

(1 kHz rate, THD, dev < N x 90 rad (dev < N x 10 rad for ESG-AP and ESG-DP series), Normal BW mode)

**External inputs**

Ext 1 or Ext 2

**Sensitivity**

1 Vpeak for indicated deviation

**Input impedance**

50 Ω, nominal

**Paths**

FM 1 and FM 2 are summed internally for composite modulation. Either path may be switched to any one of the modulation sources: Int, Ext 1, Ext 2. The FM 2 path is limited to a maximum rate of 1 MHz. The FM 2 path must be set to a deviation less than FM 1.

---

1. Parentheses denote typical performance.
2. Calculated from phase noise performance in CW mode only at +2.0 dBm for standard instruments, +5.0 dBm with Option UNB, and –1.0 dBm with Option H99.
3. For other frequencies, data rates, or bandwidths, please contact your sales representative.
4. Since the internal modulation source operates over 0.1 Hz to 50 kHz, FM rates above 50 kHz must be supplied externally.
5. Refer to frequency bands on page 4 to compute specifications.
6. At the calibrated deviation and carrier frequency, within 5 °C of ambient temperature at time of calibration.
**Amplitude modulation** *(fc > 500 kHz)*

| Input voltage | +5 V (with RF on, TTL compatible) |

Input impedance

---

1. AM is typical above 2 GHz or if wideband AM or IQ modulation is simultaneously enabled.
2. With ALC off, specifications apply after the execution of power search. With ALC on, specifications apply for pulse repetition rates ≤10 kHz and pulse widths ≥5µs.
3. With high performance pulse modulation (Option 1E6) installed, all maximum power specifications drop by 4 dB.
**Internal modulation source**

(Provides FM, ΦM, and AM modulation signals and LF out)

**Waveforms**
- sine, square, ramp, triangle, pulse, noise

**Rate range**
- Sine: 0.1 Hz to 50 kHz
- Square, ramp, triangle: 0.1 Hz to 10 kHz

**Resolution**
- 0.1 Hz
- Pulse only: 4 µs

**Frequency accuracy**
- 0.005%, typical

**Swept sine mode** (frequency, phase continuous)
- Operating modes: Triggered or continuous sweeps
- Frequency range: 0.1 Hz to 50 kHz
- Sweep time: 1 ms to 65 sec
- Resolution: 1 ms

**Dual sinewave mode**
- Frequency range: 0.1 Hz to 50 kHz
- Amplitude ratio: 0 to 100%
- Amplitude ratio resolution: 0.1%

**LF out (internal modulation source)**
- Amplitude: 0 to 3 V peak into 50 Ω
- Output impedance: <1 Ω

---

**External modulation inputs**

**Modulation types**
- Ext 1: FM, ΦM, AM, and burst envelope
- Ext 2: FM, ΦM, AM, and pulse

High/Low Indicator (100 Hz to 10 MHz BW, AC coupled inputs only) Activated when input level error exceeds 3% (nominal)

**Simultaneous modulation**

All modulation types may be simultaneously enabled, except: FM with FM; AM with burst envelope; Wideband AM with I/Q. AM, FM, and FM can sum simultaneous inputs from any two sources (INT, EXT 1, and EXT 2.) Any given source (INT, EXT 1, or EXT 2) may only be routed to one activated modulation type.
Specifications for digital models only

Level accuracy with digital modulation
(ESG-DP and ESG-D series only)
With ALC On; relative to CW; with PRBS modulated data;
if using I/Q inputs, $\sqrt{I^2 + Q^2} = 0.5 \, V_{rms}$, nominal)$^1$

$\pi/4$ DQPSK or QPSK formats

Level accuracy with ALC off$^2$ ±0.3 dB, typical
(After power search is executed; relative to CW level accuracy with
ALC on; with burst off; if external I/Q is enabled $\sqrt{I^2 + Q^2} = 0.5 \, V_{rms}$)

I/Q modulation
(ESG-DP and ESG-D series only)

I/Q inputs
Input impedance 50 Ω
Full scale input$^1$ $\sqrt{I^2 + Q^2} = 0.5 \, V_{rms}$

Adjustments/Impairments (nominal)
DC offset (I and Q independently adjustable) ±100%
I/Q gain ratio ±4 dB
I/Q quadrature ±10° (for fc ≤ 3.3 GHz)

External burst envelope
(ESG-DP and ESG-D series only)

Input voltage
| RF On | 0 V |
| RF Off | −1.0 V |
| Linear control range | 0 to −1 V |

On/off ratio

| ≤3 GHz | >75 dB |
| >3 GHz | >60 dB |
| $V_{in}$ | ≤−1.05 V |

Rise/fall time <2 µs with rectangular input, typical

Minimum burst repetition frequency

| ALC on | 10 Hz, typical |
| ALC off | dc |

External input Ext 1

Input impedance 50 Ω, nominal

Coherent carrier out$^3$
(ESG-DP and ESG-D series only)

Range 250 MHz to maximum carrier frequency
Level 0 dBm ±5 dB, typical
Impedance 50 Ω

Typical I/Q frequency response

---

1. The optimum I/Q input level is $\sqrt{I^2 + Q^2} = 0.5 \, V_{rms}$. I/Q drive level affects EVM, origin offset, spectral regrowth, and noise floor. Typically, level accuracy with ALC on will be maintained with drive levels between 0.25 and 1.0 $V_{rms}$.
2. When applying external I/Q signals with ALC off, output level will vary directly with I/Q input level. Power search is an internal calibration routine used to set output power when ALC is off. The routine disables all modulation inputs, adjusts output power while applying 0.5 $V_{rms}$ to the I/Q modulator then enables modulation.
3. Coherent carrier is modulated by FM or ΦM when enabled.
**I/Q baseband generator**

(Option UN8, ESG-DP and ESG-D series only)

### Modulation

**PSK**
- BPSK, QPSK, OQPSK, π/4DQPSK, 8PSK, 16PSK, 64PSK

**MSK**
- User-defined phase offset from 0 to 100°

**QAM**
- 4, 16, 32, 64, 256

**FSK**
- Selectable: 2, 4, 8, 16 level symmetric
- Custom: Custom map of up to 16 deviation levels

**Deviation**
- Modulation index ≤1, ≤1.5 Msym/sec
- Modulation index ≤0.5, ≤2.0 Msym/sec

**Resolution**
- 0.1 Hz

**I/Q**
- Custom map of 16 unique values for I and Q

### Filter

**Selectable**
- Nyquist, root Nyquist, Gaussian, rectangular
  - α: 0 to 1, BbT: 0.1 to 1

**Custom FIR**
- 256 coefficients, 16-bit resolution, 16 symbols long, automatically scaled

### Symbol rate

For external data or internal PN sequences in pattern mode, symbol rate is adjustable from 200 symbols/sec to maximum listed in table.

<table>
<thead>
<tr>
<th>Bits/symbol</th>
<th>Maximum symbol rate (Msym/sec)</th>
<th>Maximum data rate (Mbits/sec)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>12.5</td>
<td>12.5</td>

</tr>
<tr>
<td>7</td>
<td>7.14</td>
<td>50</td>
</tr>
<tr>
<td>8</td>
<td>6.25</td>
<td>50</td>
</tr>
</tbody>
</table>

For all other data types and data structures the maximum bit rate is 5 Mbits/sec.

### TDMA data structure

Frames and timeslots may be configured as different types of traffic or control channels. The data field of a timeslot can accept a user file, PRBS (PN9 or PN15), or external data. Maximum bit rate is 5 Mbits/sec.

### Reference frequency

Internal or external 1, 2, 5, 10 MHz reference

Data clock can be locked to an external 13 MHz (GSM) reference

---

1. PN15 is not continuous in bursted mode when TETRA is operated in a downlink mode.
2. Baseband I/Q outputs cannot be scaled for GSM and DECT.
3. Specifications apply for the frequency range, symbol Nyquist filter, filter factors, and default scaling factor specified for each standard.
4. Baseband I/Q outputs cannot be scaled for FSK and MSK.
5. Filter factor (a or BbT) is set to 0.5.

---

1. Specifications apply for the symbol rates, root raised cosine filter, filter factors (a or BbT) and default scaling factor specified for each standard, and at power levels ≤7 dBm (≤10 dBm, Option UNB).
2. ACP for TETRA is measured over a 25 kHz bandwidth, with an 18 kHz root raised cosine filter applied at power levels ≤4 dBm (≤8 dBm, Option UNB).
3. The “channel spacing” determines the offset size of the adjacent and alternate channels: Adjacent channel offset = 1 x channel spacing.
4. TETRA ACP performance is typically <−69 dBc with Option H99 in continuous modulation mode.
5. Supports IS-54 and IS-136 traffic channels only.

Multichannel, multicarrier
CDMA personality
(Option UN5, ESG-DP and ESG-D series only)

**Chip (symbol) rate**
1.2288 MHz (default)
Adjustable from 1 Hz to 10 MHz with 4x oversampling

**Modulation**
QPSK (forward) with Walsh and short code spreading
Offset QPSK (reverse) with short code spreading of random data

**Pre-defined channel configurations**
(power levels per IS-97-A)
- Pilot channel: Includes IS-95 modified filter, with equalizer
- 9 channel: Includes pilot, paging, sync, 6 traffic and IS-95 modified filter, with equalizer
- 32 channel: Includes pilot, paging, sync, 29 traffic and IS-95 modified filter, with equalizer
- 64 channel: Includes pilot, 7 paging, sync, 55 traffic and IS-95 modified filter, with equalizer
- Reverse channel: Includes IS-95 filter

**Rho**
0.9996
(≤ 4 dBm, IS-95 filter, ≤ 2 GHz, typical)

**Pilot time offset**
≤ 2 µs, typical

**User-defined CDMA**
Channel table editor
- Number of channels: 1 to 256
- Walsh codes: 0 to 63
- Channel power: 0 to –40 dB
- PN Offset: 0 to 511
- Data: 00-FF(HEX) or random

**Walsh code power selection**
- IS-97 compliant
- Equal channel power
- Scaled to 0 dB
- User-defined

**IS-95 filter selection**
- IS-95
- IS-95 with equalizer
- IS-95 modified
- IS-95 modified with equalizer

All are IS-95 compliant. “Modified” filters reduce spurious emissions for adjacent channel power measurements.

**Other FIR filters**
- Nyquist, root Nyquist: α = 0 to 1
- Gaussian: B_eT = 0.1 to 1
- Custom FIR: Up to 256 coefficients
- 16-bit resolution
- Automatically scaled

**Oversample ratio**
Range: 2 to 8
Resolution: 1

**Multicarrier**
- Number of carriers: 3 or 4 (predefined), up to 12 (user-defined)
- Carrier channels: Pilot, 9 channel, 32 channel, 64 channel, reverse, custom
- Frequency offset (per carrier): ±7.5 MHz
- Offset resolution: <100 Hz
- Carrier power (per carrier): 0 dB to –40 dB

**Clipping**
- Clip location: Pre or post FIR filter
- Clipping type: |I+jQ|, |I| and |Q|
- Clipping range: 10% to 100%
  (clip the modulation level to a percentage of full scale. A level of 100% equates to no clipping)

---

1. Parentheses denote typical performance.
2. Specifications apply with high crest factor off.

Bit Error Rate (BER) analyzer
(Option UN7, ESG-DP and ESG-D series only)

**Clock rate**
100 Hz to 10 MHz

**Supported data patterns**
PN9 and PN15

**Resolution**
10 digits (6 digits for BER (exp))

**Minimum synchronization length**
- 2 Mbps mode: 9 bits (PN9), 15 bits (PN15)
- 10 Mbps mode: 43 bits (PN9), 48 bits (PN15)

**Bit sequence length**
100 bits to 4.294 Gbits after synchronization

**Features**

**GSM/EDGE base station**

**Bit Error Rate Test (BERT)**

(ESG-D series only)

(Option 300 requires Option UN8 revision C or better.
Option UNA is highly recommended. The following are required:

**GSM BTS test only**
E4406A VSA-series transmitter tester with Options BAH (EDGE measurement personality) and 300 Rev. A (321.4 MHz output).

**GSM/EDGE BTS test**
E4406A VSA-series transmitter tester with Option 202 (GSM and EDGE measurement personality) and Option 300 Rev. B (321.4 MHz output). ESG firmware Option 202, EDGE personality, is also required. To upgrade from Option 300 Rev. A to Option 300 Rev. B requires new hardware.

See configuration guide for a bundled ordering convenience.

**Test technique**
RF loopback

**Supported systems**
- GSM 400
- GSM 850
- GSM 900 (P-GSM)
- DCS 1800
- PCS 1900
- E-GSM (extended)

**GSM output data**
- Channel content
  - Full-rate speech (FS)
- Data
  - PN9, PN15 coded as per ETSI GSM, 05.03 version 3.6.1 (Oct 94).
- Frame structure
  - 26-frame TCH multiframe structure as per ETSI GSM, 05.01 version 6.1.1 (1998-07).
- Adjacent timeslots
  - PN9, PN15 coded as per ETSI, GSM, 05.03 version 3.6.1 (Oct 94).
- Frame structure
  - 26-frame TCH multiframe structure as per ETSI GSM, 5.01 version 6.1.1 (1998-07).

1. Perch power level is 3 dB below DPCH power.
2. DPCCH power level is 6 dB below DPDCCH power.
Measurements

Results
Class Ib bit-error ratio (RBER for TCH/FS)
Class II bit-error ratio (RBER for TCH/FS)
Frame erasure ratio (FER)
Downlink error frame count
Class Ib bit-error count
Class II bit-error count
Erased frame count
Total frame count

Maximum RBER
100%

Maximum FER
100%

Measurement modes
Static reference
Sensitivity test (BER%)
RBER at user-specified power level measured. (This is the complete conformance test as defined in ETSI 300 609-1 (GSM 11.21) version 4.12.0 (Dec 98), section 7.3.4.

BER sensitivity search
Automatically finds the input level (sensitivity) that causes a user specified RBER (normally 2%) for class II bits.

Maximum frame count
6,000,000 speech frames

EDGE/EGPRS output data
Channel content
Continuous PN9 or PN15
Sequence for raw BER
Continuous PN9 or PN15
Sequence on header and data payload.

Data
Fully coded MCS-5 and MCS-9; channel coding provided on PN9 or PN15 for data payload. Coding is done on frames 0 – 11, 13-24, 26-37, 39-50 on a 52 PDCH multiframe. The selected signal pattern is inserted continuously across the full payload.

Frame structure
52-frame multiframe structure for EDGE/EGPRS channel as per ETSI GSM 05.01 release 99.
Frames 12, 25, 38 and 51 are empty (no burst).

Adjacent timeslots
Continuous uncoded PN9, PN15 or coded MCS-5 or MCS-9 with PN9 or PN15 sequence data payload.
Note: Maximum of 4 timeslots can be turned on with EDGE/EGPRS multiframe coded data.

Measurement modes
Static reference
Sensitivity test (BER%)
Baseband BER (Bit Error Rate) tester
(Included with Option 300; cannot be ordered separately.)

1. Parentheses denote typical performance.
2. Valid for 23 ± 5 °C.
Multichannel cdma2000 personality
(Option 101, ESG-DP and ESG-D series only)

This personality conforms to cdma2000 specification revision 8. Provides partially coded data for component test applications.

**Spreading rate**
1x (SR1), 3x (SR3)

**IS-95 filter selection**
- IS-95
- IS-95 with equalizer
- IS-95 modified
- IS-95 modified with equalizer

All are IS-95 compliant. “Modified” filters reduce spurious emissions for adjacent channel power measurements.

**Other FIR filters**
- Nyquist, root Nyquist
- Gaussian
- Custom FIR
- Rectangle

**I/O mapping**
Normal, invert

**Clipping**
- Clip location: Pre-or post-FIR filter
- Clipping type: |I+Q|, |I| and |Q|
- Clipping range: 10% to 100%

(clip the modulation level to a percentage of full scale. A level of 100% equates to no clipping.)

**Multicarrier**
Up to 12 (user defined, individually configured)

**Frequency offset**
(per carrier) –7.5 MHz to +7.5 MHz

**Power offset**
0 dB to –40 dB

**Forward link**
**Spreading type**
Direct spread (DS), multicarrier

**Pre-defined channel configurations (partially coded)**
- Pilot channel, DS/SR1
- Pilot channel, DS/SR3
- Pilot channel, Multicarrier/SR3
- 9 channel, DS/SR1

**Reverse link**
**Spreading type**
Direct spread only

**Pre-defined channel configurations (partially coded)**
- Pilot channel, SR1
- Pilot channel, SR3

**User-defined cdma2000 Channel types**
- Pilot, paging (SR1 only), sync, fundamental, and supplemental
- Pilot at Walsh 0

**Radio configuration**
SR1: 1 to 5
SR3: 6 to 9

**Data rate**
1.2 kbps to 1036.8 kbps, depends on the selected radio configuration

**Walsh code**
Pilot and sync have fixed codes, Walsh 0 and 32. Other channels have codes selected from specific ranges depending on the radio configuration chosen

**Channel power**
0 to –40 dB

**PN offsets**
0 to 511

**Data pattern**
00-FF(HEX) or random

**EVM**
<2.1%

(825 to 2100 MHz, SR3 pilot, IS-95 filter, which is optimized for EVM, typical)
**Multichannel cdma2000 spurious emissions**

(dBc, with high crest factor on IS95 modified with equalizer filter and amplitude = ≤0 dBm)

- 1 kcps to 4.25 Mcps

**Primary scrambling code**
- 0 to 16777215

**Secondary scrambling offset**
- 0 to 15

**Uplink synchronization signal setup**
- Timing offset range: Timing offset 512 to 2560 chips
- Slot delay 0 to 119 slots
- Synchronization signal: System Frame Number (SFN) reset or frame clock
- Frame clock interval: 10 ms, 20 ms, 40 ms, 80 ms
- Frame clock polarity: Positive, negative
- SFN RST polarity: Positive, negative
- Sync trigger mode: Single, continuous
- BBG data clock (chip clock) setup: internal, external
- External clock rate: x 1 (3.84 MHz), x 2 (7.68 MHz), x 4 (15.36 MHz)
- External clock polarity: Positive, negative

**Uplink channel configurations**
- Pre-set channel type
  - Reference measurement channel: 12.2 kbps, 64 kbps, 144 kbps, 384 kbps
  - UDI 64 k
  - AMR 12.2 k

**User defined channels**
- One DPCCH, one DPDCH, up to 6 transport channels

**DPDCH (Dedicated Physical Data Channel)**
- Power: Off, -40 to 0 dB
- Beta: 0 to 15 (coupled to power)
- Channel code: 0 to 255 (maximum value depends on symbol rate/slot format)
- Data: PN9, PN15, 4-bit repeating pattern, user file, transport channel
- Symbol rate: 15, 30, 60, 120, 240, 480, 960 kbps depending on slot format
- Slot format: 0 to 6

**Transport channel setup**
- Block size: 0 to 5000
- Number of blocks: 0 to 4095
- Coding: 1/2 convolutional, 1/3 convolutional, turbo, none
- TTI: 10 ms, 20 ms, 40 ms, and 80 mSec
- Data: PN9, 4-bit repeating pattern, user file
- Rate matching attributes: 1 to 256
- CRC size: 0, 8, 12, 16, 24
- Error insertion: BLER or BER, or none
- BLER (Block Error Rate): 0 to 1 (resolution 0.001)
- BER (Bit Error Rate): 0 to 1 (resolution 0.0001)
- Bits frame: Automatically calculated

**Input**
- Synchronization signal (SFN RST or frame clock): Pattern trigger in BBG data clock (chip clock): data clock in

**Output**
- Chip clock out (3.84 MHz): Data clock out
- Frame timing out: system sync out
- DPDCH (I) symbol data: event1 out
- DPDCH (I) symbol clock: event2 out
- DPCCH (Q) symbol data: data out
Real-time cdma2000 personality
(Option 201, ESG-DP and ESG-D series only)

Description
Option 201, cdma2000 personality, adds a flexible solution for cdma2000 mobile and base station test to Agilent Technologies ESG-D and ESG-DP (high spectral purity) series RF signal generators. Option 201 is a firmware personality that requires Option UN8, (hardware revision C or greater), real-time baseband generator to be installed in the ESG. The fully coded nature of this solution in both forward and reverse mode supports long and short codes, cyclic redundancy checks, convolutional or turbo encoding, interleaving, power control, and complex scrambling. Additional capabilities allow flexible channel configurations with individually adjustable power levels and data rates, customizable user data, and variable chip rates. The option is backwards compatible with IS–95A, in both the base station and mobile simulation modes, through support of radio configuration 1 and 2.

Global controls across all channels
Channel power 0 to –40 dB
I/Q voltage scale 0 to –40 dB

Forward channel configurations
Channel types generated
Up to four channels simultaneously, of any of the following
- Pilot
- Paging
- Sync
- F-Fundamental
- F-Supplemental
- OCNS

BNC MUX outputs
Event 1 Delayed even second, 20 ms trig delay, 80 ms trig delay, offset 80 ms trig, 25 ms clock, page enable sync, offset 80 ms sync
Data out PC ramp, Yi FFCH, Yq FFCH, FPCH W, Sync W, FPCH X, 25 ms clock
Data clock out Chip clock, 19.2 clock, 38.4 clock, offset 80 ms trig, forward channel clock, forward channel I clock, forward channel Q clock
Symbol sync out Even second, FPCH page, page sync, FFCH page, 20 ms trig delay, FFCH frame sync, PN sync

BTS setup
Filter Root Nyquist, Nyquist, Gaussian, IS-95, IS-95 w/ EQ, IS-95 MOD, IS-95 MOD w/ EQ, rectangle, APCO 25 C4FM, user file
Spread rate 1
PN offset 0-511
Chip rate 50 cps-1.3 Mcps
Even second delay 0.5 to 128 chips
Long code state 0 to 3FFFFFFFF

Pilot channel
Walsh 0 (non-adjustable)

Sync channel
Walsh 0 to 63
Data Free editing of the following fields: SID, NID, F-synch type, Sys_Time, PRAT, LTM_Off, Msg_Type, P_REV, MIN_P_REV, LP_SEC, DAYLT, CDMA Freq, ext CDMA freq, and Reserved

Paging channel
Walsh 0 to 63
Data Default paging message or userfile
Long code mask 0-3FFFFFFFFh
Rate 4.8 or 9.6 kbps

Fundamental channel
Radio configuration 1 to 5
Walsh 0 to 63
Data rate 1.2 to 14.4 kbps, depending on radio configuration
Data PN9, PN15, userfile, external serial data, or predefined bit patterns
Long code mask 0-3FFFFFFFFh
Power control N up/down, "N" may be set from 1 to 80
Power puncture On/off
Frame offset 0 (non-adjustable)
Frame length 20 ms (non-adjustable)

Supplemental channel
Same channel configuration as fundamental, except:
Radio configuration 3 to 5
Walsh 0-63, depending on RC and data rate
Data rate 19.2 to 307.2 kbps, depending on radio configuration
Turbo coding May be selected for data rates from 28.8 to 153.6 kbps
Power control Not provided
Power puncture Not provided

OCNS channel
Walsh 0 to 63

Inputs
External data Can be selected for one channel, either fundamental or supplemental

Outputs Various timing signals such as chip clock and even second
Reverse channel configurations

IS-95 is supported using RC1 or RC2 which utilizes a single, selectable channel type:
- Reverse Access Control Channel (R–ACH)
- Reverse Fundamental Channel (R–FCH)
- Reverse Supplemental Channel (R–SCH)

IS-2000 features are supported using RC3 or RC4. The channel types consist of the following:
- Reverse Pilot Channel (R–PICH) (with or without gating)
- Reverse Dedicated Control Channel (R–DCCH)
- Reverse Common Control Channel (R–CCCH)
- Reverse Enhanced Access Channel (R–EACH)

BNC MUX outputs

Event 1 Delayed even second, PN sync
Data out Long code, pilot, coded RSCH, coded RDCCH, coded RFCH, coded RCCCH, coded REACH, Z, Q
Data clock out Chip clock, 5 ms, 10 ms, 20 ms, 40 ms, 80 ms
Symbol sync out Even second, long code sync

Mobile set-up

Radio configuration 1 to 4
Trigger advance 1 to 2457599
Trigger edge Rising, falling
Long code state 0 to 3FFF FFFF FFFF FFFF hex
Long code mask 0 to 3FFF FFFF FFFF FFFF hex

Radio configurations 1¹ and 2¹

Reverse Access Channel (RACH)
- Data PN9, PN15, fixed 4 bit pattern, user file
- Data rate 4.8 kbps
- Frame length 20
- Frame offset 0 to 15

Reverse Fundamental Channel (R-FCH)
- Data PN9, PN15, fixed 4 bit pattern, user file
- Data rate 1.2 kbps, 2.4 kbps, 4.8 kbps, 9.6 kbps for RC1
- 1.8 kbps, 3.6 kbps, 7.2 kbps, 14.4 kbps for RC2
- Frame length 20 mSec
- Frame offset 0 to 15

Reverse Supplemental Channel 0 (R-SCH)
- Turbo coding On/off
- Data PN9, PN15, fixed 4 bit pattern, user file
- Data rate 1.2 kbps, 2.4 kbps, 4.8 kbps, 9.6 kbps for RC1
- 1.8 kbps, 3.6 kbps, 7.2 kbps, 14.4 kbps for RC2
- Frame length 20 mSec
- Frame offset 0 to 15

Radio configurations 3 and 4

Reverse Pilot Channel (R-PICH)
- Walsh code 0 (non adjustable)
- Gating rate Quarter, half, full
- PCB data 0 to FFFF hex

Reverse Dedicated Control Channel (R-DCCH)
- Walsh code 0 to 15
- Data PN9, PN15, fixed 4 bit pattern, user file
- Frame length 5 or 20 mSec
- Data rate For frame length = 5
- 9.6 kbps, for RC 3 or 4
- For frame length = 20
- 9.6 kbps for RC 3 and 14.4 kbps for RC4
- Frame offset (0 to frame length/1.25) - 1

Reverse Fundamental Channel (R-FCH)
- Walsh code 0 to 15
- Data PN9, PN15, fixed 4 bit pattern, user file
- Frame length 5 or 20 mSec
- Data rate For frame length = 5
- 9.6 kbps, for RC 3 or 4
- For frame length = 20
- 1.5, 2.7, 4.8, and 9.6 kbps for RC 3
- 1.8, 3.6, 7.2, and 14.4 kbps for RC4
- Frame offset (0 to frame length/1.25) - 1

Reverse Supplemental Channel 0 (R-SCH0)
- Walsh code 0 to 7
- Data PN9, PN15, fixed 4 bit pattern, user file
- Frame length 20, 40 or 80 mSec
- Data rate For frame length = 20
- 1.5, 2.7, 4.8, 9.6, 19.2, 38.4, 76.8, 153.6 kbps for RC 3
- 307.2 kbps for RC 4
- 1.8, 3.6, 7.2, 14.4, 28.8, 57.6, 115.2, 230.4 kbps for RC4
- For frame length = 40
- 1.35, 2.4, 4.8, 9.6, 19.2, 38.4, 76.8, 153.6 kbps for RC 3
- 1.8, 3.6, 7.2, 14.4, 28.8, 57.6, 115.2 kbps for RC4
- For frame length = 80
- 1.2, 2.4, 4.8, 9.6, 19.2, 38.4, 76.8, 153.6 kbps for RC 3
- 1.8, 3.6, 7.2, 14.4, 28.8, 57.6, 115.2 kbps for RC4
- Frame offset (0 to frame length/1.25) - 1

Reverse Supplemental Channel 1 (R-SCH1)
- Walsh code 0 to 7
- Data PN9, PN15, Fixed 4 bit pattern, user file
- Frame length 20, 40 or 80 mSec
- Data rate For frame length = 20
- 1.5, 2.7, 4.8, 9.6, 19.2, 38.4, 76.8, 153.6 kbps for RC 3
- 1.8, 3.6, 7.2, 14.4, 28.8, 57.6, 115.2 kbps for RC4
- For frame length = 40
- 1.35, 2.4, 4.8, 9.6, 19.2, 38.4, 76.8, 153.6 kbps for RC 3
- 1.8, 3.6, 7.2, 14.4, 28.8, 57.6, 115.2 kbps for RC4
- Frame offset (0 to frame length/1.25) - 1

1. Only one channel is available in RC1 and RC2.
2. These data rates are available with turbo encoding.
3. If either REACH or RCCCH is on, then RPICH is the only other channel that can be on.
For frame length = 5
38.4 kbps
For frame length = 10
19.2, 38.4 kbps
For frame length = 20
9.6, 19.2, 38.4 kbps

Real-time EDGE personality
(Option 202, ESG-DP and ESG-D series only)

Description
Option 202 is a firmware personality built upon the internal real-time I/Q baseband generator (Option UN8). This option will simulate both uplink and downlink EDGE signals. Data can be generated internally or externally with continuous data, or bursted and framed signals. Use custom filtering and framing to keep pace with the evolving definition of EDGE.

Modulation
3π/8-rotating 8PSK (per EDGE specifications) user-selectable (see Modulation under Option UN8)

Filter
“Linearized” Gaussian (per EDGE specifications) user-selectable (see Filter under Option UN8)

Symbol rate
User-adjustable (see Symbol rate under Option UN8) 270.833 kHz (default)

Burst Shape
defaults to EDGE standard power vs. time mask with user definable rise and fall time. Alternatively, upload externally defined burst shape waveforms.

Data structure
Time slots may be configured as normal or custom. The data field of a time slot can accept a user file, PRBS (PN9 or PN15), a fixed sequence or external data. All other fields in a timeslot are editable.

EVM performance (typical)

<table>

Alternate time slot power level control
(Option UNA, ESG-DP and ESG-D series only)

Amplitude is settled within 0.5 dB in 20 µsecs, +4 to −136 dBm at 23 ± 5 °C

Improved ACP performance for TETRA, CDMA and W-CDMA
(Option H99, ESG-D and ESG-DP series only)

ACP improvements for TETRA, CDMA and W-CDMA are listed in the appropriate heading under Options 100, 101, UN8, UN5, and H98 respectively. Specifications that are changes from the standard are listed below.

Output power
250 kHz to 3 GHz + 10 dBm to −136 dBm
>3 GHz + 4 dBm to −136 dBm

Coherent carrier out
−4 dBm ± 5 dBm, typical

Level accuracy
Specifications degrade by 0.2 dB

Level accuracy with digital modulation
≤3 GHz specifications apply at ≤+7 dBm output power
>3 GHz specifications apply at ≤+4 dBm output power

DC vector accuracy
>3.7 GHz specifications apply down to >3 GHz
>3 GHz specifications apply at ≤4 dBm
Attenuator hold level range is same as Option UNB

Spectral purity nonharmonics
>3 GHz specifications apply at ≤+4 dBm output power

Amplitude modulation
500 kHz to 3 GHz specification is typical
>3 GHz not specified

Pulse modulation
On/off ratio
<250 MHz >60 dB

Pulse modulation
Level accuracy < ± 0.7 dB (relative to CW), typical

1. All specifications apply at 23 ± 5 °C.
2. With ALC OFF, specifications apply after the execution of power search.
   With ALC ON, specifications apply for pulse repetition rates ≤10 kHz
   and pulse widths ≥ 5 µs.
3. EDGE and IS-136HS traffic channels have the same physical layer. This EDGE signal can be used to simulate an IS-136HS traffic channel for component tests.
General characteristics

Power requirements
90 to 254 V; 50, 60, or 400 Hz; 200 W maximum

Operating temperature range
0 to 55 °C

Storage temperature range
–40 to 71 °C

Shock and vibration
Meets MIL-STD-28800E Type III, Class 3.

Leakage: Conducted and radiated interference meets MIL-STD-461C CE02 Part 2 and CISPR 11. Leakage is typically <1 µV (nominally 0.1 µV with a 2-turn loop) at ≤1000 MHz, measured with a resonant dipole antenna, one inch from any surface with output level <0 dBm (all inputs/outputs properly terminated).

Storage registers: Memory is shared by instrument states, user data files, sweep list files and waveform sequences. Depending on the number and size of these files, up to 800 storage registers and 10 register sequences are available.

Weight
<13.5 kg (28 lb.) net, <19.5 kg (42 lb.) shipping

Dimensions
133 mm H x 426 mm W x 432 mm D (5.25 in H x 16.8 in W x 17 in D)

Remote programming

Control languages SCPI version 1992.0, also compatible with 8656B and 8657A/B/C/D/J mnemonics.

Functions controlled All front panel functions except power switch and knob.

IEEE-488 functions SH1, AH1, T6, TE0, L4, LE0, SR1, RL1, PP0, DC1, DT0, C0, E2.

ISO compliant
The ESG series RF signal generators are manufactured in an ISO-9001 registered facility in concurrence with Agilent Technologies commitment to quality.

Accessories

Transit case Part number 9211-1296

Remote interface 83300A

Inputs and outputs

All front panel connectors can be moved to rear with Option 1EM.

RF output
Nominal output impedance 50 ohms. (type-N female, front panel)

LF output
Outputs the internally-generated LF source. Outputs 0 to 3 Vpeak into 50 ohms, or 0 to 5 Vpeak into high impedance. (BNC, front panel)

External input 1
Drives either AM, FM, φM, or burst envelope. Nominal input impedance 50 ohms, damage levels are 5 Vrms and 10 Vpeak. (BNC, front panel)

External input 2
Drives either AM, FM, φM, or pulse. Nominal input impedance 50 ohms, damage levels are 5 Vrms and 10 Vpeak. (BNC, front panel)

Auxiliary interface
Used with 83300A remote keypad sequencer (9-pin RS-232 connector female, rear panel)

10 MHz input
Accepts a 10 MHz ±10 ppm (standard timebase) or ±1 ppm (high-stability timebase) reference signal for operation with an external timebase. Nominal input impedance 50 ohms. (BNC, rear panel)

10 MHz output
Outputs the 10 MHz internal reference level nominally +7 dBm ±2 dB. Nominal output impedance 50 ohms. (BNC, rear panel)

GPIB
Allows communication with compatible devices. (rear panel)

Sweep output
Generates output voltage, 0 to +10 V when signal generator is sweeping. Output impedance <1 ohm, can drive 2000 ohms. (BNC, rear panel)

Trigger output
Outputs a TTL signal: high at start of dwell, or when waiting for point trigger in manual sweep mode; low when dwell is over or point trigger is received, high or low 4 µs pulse at start of LF sweep. (BNC, rear panel)

Trigger input
Accepts TTL signal for triggering point-to-point in manual sweep mode, or to trigger start of LF sweep. Damage levels ≥+10 V or ≤–4 V. (BNC, rear panel)

With ESG-AP and ESG-A series and

Option 1E6 only

Pulse input
Drives pulse modulation. Input impedance TTL. (BNC, front or rear panel)

With ESG-DP and ESG-D series only

“1” input
Accepts an “I” input either for I/Q modulation or for wideband AM. Nominal input impedance 50 ohms, damage levels are 1 V rms and 10 Vpeak. (BNC, front panel)

“Q” input
Accepts a “Q” input for I/Q modulation. Nominal input impedance 50 ohms, damage levels are 1 V rms and 10 Vpeak. (BNC, front panel)

1. ESG series does not implement 8657A/B “Standby” or “On” (R0 or R1, respectively) mnemonics.
General characteristics (continued)

Coherent carrier output
Outputs RF modulated with FM or $\Phi M$, but not IQ or AM. Nominal power 0 dBm ±5 dB. Frequency range from 249.9990001 MHz to maximum frequency. For RF carriers below this range, output frequency = 1 GHz – frequency of RF output. Damage levels 20 Vdc and 13 dBm reverse RF power. (SMA, rear panel)

With ESG-DP and ESG-D series and Option UN8 only
Data input
Accepts serial data for digital modulation applications. Expects CMOS input. Leading edges must be synchronous with DATA CLOCK falling edges. Damage levels are >+8 and <-4 V. (BNC, front panel)

Data clock input
Accepts CMOS clock signal (either bit or symbol), to synchronize inputting serial data. Damage levels are >+8 and <-4 V. (BNC, front panel)

Symbol sync input
Accepts CMOS synchronization signal. Symbol sync might occur once per symbol or be a single, one bit wide pulse to synchronize the first bit of the first symbol. Damage levels are >+8 and <-4 V. (BNC, front panel)

Baseband generator reference input
Accepts 0 to +20 dBm sinewave, or TTL squarewave, to use as reference clock for GSM applications. Only locks the internal data generator to the external reference; the RF frequency is still locked to the 10 MHz reference. Nominal impedance is 50 ohms at 13 MHz, AC-coupled. Damage levels are >+8 and <-8 V. (BNC, rear panel)

Burst gate input
Accepts CMOS signal for gating burst power when externally supplying data. Damage levels are >+8 and <-4 V. (BNC1, rear panel)
Pattern trigger input accepts CMOS signal to trigger internal pattern or frame generator to start single pattern output. Damage levels are >+8 and <-8 V. (BNC1, rear panel)

Event 1 output
Outputs pattern or frame synchronization pulse for triggering or gating external equipment. May be set to start at the beginning of a pattern, frame, or timeslot and is adjustable to within ± one timeslot with one bit resolution. Damage levels are >+ 8 and <-4 V. (BNC1, rear panel)

Event 2 output
Outputs data enable signal for gating external equipment. Applicable when external data is clocked into internally generated timeslots. Data is enabled when signal is low. Damage levels >+8 and <-4 V. (BNC1, rear panel)

Data output
Outputs data from the internal data generator or the externally supplied signal at data input. CMOS signal. (BNC1, rear panel)

Data clock output relays a CMOS bit clock signal for synchronizing serial data. (BNC1, rear panel)

Symbol sync output
Outputs CMOS symbol clock for symbol synchronization, one data clock period wide. (BNC1, rear panel)

"I" and "Q" baseband outputs
Outputs in-phase and quadrature-phase component of I/Q modulation from the internal baseband generator. Full scale is 1 V peak to peak. Nominal impedance 50 ohms, DC-coupled, damage levels are >+2 and <-2 V. (BNC, rear panel)

With ESG-DP and ESG-D series and Option UND only
Baseband generator reference input
Accepts a TTL or > –10 dBm sinewave. Rate is 250 kHz to 20 MHz. Pulse width is >10 ns.

Trigger types
Continuous, single, gated, segment advance

"I" and "Q" baseband outputs
Outputs in-phase and quadrature-phase component of I/Q modulation from the internal baseband generator. Full scale is 1 V peak to peak. Nominal impedance 50 ohms, DC-coupled, damage levels are >+2 and <-2 V. (BNC, rear panel)

Event 1 output
Even second output for multichannel CDMA. Damage levels are >+8 V and <-4 V. (BNC1, rear panel)

With ESG-DP and ESG-D series and Option UN7 only
Data, clock and clock gate inputs
Accepts TTL or 75 $\Omega$ input. Polarity is selected. Clock duty cycle is 30% to 70%. Damage levels are >+8 V and <-4 V (BNC1, rear panel)

Sync loss output
Outputs a TTL signal that is low when sync is lost. Valid only when measure end is high. Damage levels are >+8 V and <-4 V. (SMB, rear panel)

No data detection output
Outputs a TTL signal that is low when no data is detected. Valid only when measure end is high. (SMB, rear panel)

Error-bit-output (not supported at 10 Mbps rate)
Outputs 80 ns (typical) pulse when error bit is detected. (SMB, rear panel)

Test result output
Outputs a TTL signal that is high for fail and low for pass. Valid only on measure end falling edge. (SMB, rear panel)

Measure end output
Outputs a TTL signal that is high during measurement. Trigger events are ignored while high. (SMB, rear panel)

With ESG-DP and ESG-D series and Option UNA
Alternate power input
Accepts CMOS signal for synchronization of external data and alternate power signal timing. Damage levels are >+8 and <-4 V. (BNC1, rear panel)

With ESG-D and Option 300
321.4 MHz input
Accepts a 321.4 MHz IF signal. Nominal input impedance 50 ohms. (SMB, rear panel)

1. Option 1EM replaces this BNC connector with an SMB connector.

Agilent Technologies’ Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlie Agilent’s overall support policy: “Our Promise” and “Your Advantage.”

Our Promise
Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you use Agilent equipment, we can verify that it works properly, help with product operation, and provide basic measurement assistance for the use of specified capabilities, at no extra cost upon request. Many self-help tools are available.

Your Advantage
Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and onsite education and training, as well as design, system integration, project management, and other professional engineering services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.
