The Model 1000T2G8B is a self contained, forced air cooled, broadband traveling wave tube (TWT) microwave amplifier designed for applications where instantaneous bandwidth, high gain and high power output are required. Reliable TWT subsystems provide a conservative 1000 watts minimum over most of the frequency range at the amplifier output connector. Stated power specifications are at fundamental frequency.

The amplifier’s front panel digital display shows forward and reflected output plus extensive system status information accessed through a series of menus via soft keys. Status indicators include power on, warm-up, standby, operate, faults, excess reflected power warning and remote. Standard features include a built-in IEEE-488 (GPIB) interface, 0dBm input, VSWR protection, gain control, RF output sample ports, plus monitoring of TWT helix current, cathode voltage, collector voltage, heater current, heater voltage, baseplate temperature and cabinet temperature. Modular design of the power supply and RF components allow for easy access and repair. Use of a switching mode power supply results in significant weight reduction.

The rated power is developed by efficiently power combining the outputs from two 535 watts (nominal) microwave tubes that are factory matched in gain and phase to offer moderate harmonic levels without added filters. Amplifier includes wheels, leveling feet and lifting hooks.

The Model 1000T2G8B provides readily available RF power for a variety of applications in Test and Measurement, (including EMC RF susceptibility testing), Industrial and University Research and Development, and Service applications. Unit is CE marked to comply with EMC European Directive 89/336/EEC for operation inside a shielded room.

Refer to the Model Configuration Chart for alternative configurations.
SPECIFICATIONS, MODEL 1000T2G8B

POWER (fundamental), CW, @ OUTPUT CONNECTOR
Nominal ................................................................. 1100 watts
Minimum ............................................................. 900 watts minimum, 2.5–2.7GHz.
................................................................. 1000 watts minimum 2.7–7.5GHz.
Linear @ 1 dB Compression .................................. 250 watts minimum

FLATNESS .......................................................... ±8 dB maximum, equalized for
............................................................................. ±3 dB maximum at rated power

FREQUENCY RESPONSE ....................................... 2.5–7.5 GHz instantaneously

INPUT FOR RATED OUTPUT ............................... 1.0 milliwatt maximum

GAIN (at maximum setting) ................................. 60 dB minimum

GAIN ADJUSTMENT (continuous range) ............... 35 dB minimum

INPUT IMPEDANCE .............................................. 50 ohms, VSWR 2.0:1 maximum

OUTPUT IMPEDANCE ......................................... 50 ohms, VSWR 2.5:1 typical

MISMATCH TOLERANCE ....................................... Output power foldback protection at reflected power exceeding 200 watts. Will
operate without damage or oscillation with any magnitude and phase of source
and load impedance. May oscillate with unshielded open due to coupling to
input. Should not be tested with connector off.

MODULATION CAPABILITY ................................. Will faithfully reproduce AM, FM, or pulse modulation appearing on the input
signal. AM peak envelope power limited to specified power.

NOISE POWER DENSITY ................................. Minus 80 dBm/Hz (maximum)
................................................................ Minus 90 dBm/Hz (typical)

HARMONIC DISTORTION ................................. Minus 15 dBc maximum, Minus 17 dBc typical

PRIMARY POWER ............................................ See Model Configuration

CONNECTORS
  RF input .......................................................... Type N female
  RF output ........................................................ See Model Configuration
  RF output sample ports (forward and reflected) .... Type N female
  GPIB ............................................................. IEEE-488 female on rear panel
  Interlock ..................................................... DB-15 female on rear panel

COOLING .......................................................... Forced air (self contained fans), air entry and exit in rear.

WEIGHT (approximate) ...................................... 295 kg (650 lb)

SIZE (WxHxD) ................................................... 56 x 160 x 82.3 cm (22.1 x 63 x 32.4 in)
