The Model 3000W1000A is a self-contained, air-cooled, broadband, completely solid-state amplifier designed for applications where instantaneous bandwidth and high gain are required. Push-pull circuitry is utilized in all high power stages in the interest of lowering distortion and improving stability. The Model 3000W1000A, when used with a sweep generator, will nominally provide over 3000 watts of RF power.

The Model 3000W1000A is equipped with a Digital Control Panel (DCP) which provides both local and remote control of the amplifier. The DCP uses a graphic display, menu assigned softkeys, a single rotary knob, and four dedicated switches (POWER, STANDBY, OPERATE and FAULT/RESET) to offer extensive control and status reporting capability. The display provides operational presentation of Forward Power and Reflected Power plus control status and reports of internal amplifier status. Special features include a gain control, internal/external automatic level control (ALC) with front panel control of the ALC threshold, pulse input capability and RF output level protection. Also included is an internal RF detector which provides an output for use in self-testing or operational modes.

All amplifier control functions and status indications are available remotely in GPIB / IEEE-488.2 format, and RS-232 fiber optic. The bus interface connector is located on the back panel and positive control of local or remote operation is assured by a keylock on the front panel of the amplifier.

Housed in stylish, contemporary equipment racks, the Model 3000W1000A provides readily available RF power for typical applications such as RF susceptibility testing, antenna and component testing, watt meter calibration, and as a driver for frequency multipliers and higher power amplifiers.

The 3000W1000A consists of three 1000 watt amplifiers which can be operated as independent individual amplifiers and a controller/driver equipment rack.

By simply adding one 1000 watt amplifier and the appropriate combiner along with minor tuning, the 3000W1000A is upgraded to a 4000 watt amplifier.
SPECIFICATIONS, MODEL 3000W1000A

RATED OUTPUT POWER ............................................... 2800 watts minimum
INPUT FOR RATED OUTPUT .......................................... 1.0 milliwatts maximum
POWER OUTPUT @ 3dB compression
   Nominal ............................................................... 3000 watts
   Minimum ............................................................ 2400 watts
POWER OUTPUT @ 1dB
   Nominal ............................................................... 2500 watts
   Minimum ............................................................ 1850 watts
FLATNESS ..................................................................... ±2.5 dB maximum
   ±0.8 dB with internal leveling
FREQUENCY RESPONSE ............................................... 80-1000 MHz instantaneously
GAIN (at maximum setting) ........................................... 65 dB minimum
GAIN ADJUSTMENT (continuous range) ......................... 18 dB minimum
INPUT IMPEDANCE ....................................................... 50 ohms, VSWR 2.0:1 maximum
OUTPUT IMPEDANCE ................................................... 50 ohms nominal
MISMATCH TOLERANCE * ............................................ 100% of rated power without foldback up to 6.0:1 mismatch above which may
   limit to 1500 watts reflected power. Will operate without damage or oscillation
   with any magnitude and phase of source and load impedance.
*See Application Note #27.
MODULATION CAPABILITY ........................................... Will faithfully reproduce AM, FM, or pulse modulation appearing on the input
   signal
HARMONIC DISTORTION ............................................. Minus 20 dBc maximum at 2400 watts
THIRD ORDER INTERCEPT POINT ................................. 72 dBm typical
RF POWER DISPLAY ...................................................... 0-4500 watts
PRIMARY POWER (specify voltage) ................................. 200-250 VAC, Delta Connected (4 wire)
   360-435 VAC, Wye Connected (5 wire)
   50/60 Hz, 3 phase
   37 kVA Maximum
CONNECTORS
   RF input ............................................................... Type N female on front panel
   RF output ............................................................ Type 1 5/8 EIA on rear
   External leveling inputs ........................................... Type BNC female on front panel
   Pulse modulation input .......................................... Type BNC female on front panel
   Detected RF output ............................................... Type BNC female on front panel
   Safety interlock ..................................................... 15 pin female subminiature D on rear panel
   Remote control .................................................... 24 Pin female GPIB/IEEE-488 and 9-pin RS-232 connectors on rear panel
   Remote control (fiber optic) .................................... ST connector. Tx and Rx RS-232
COOLING .................................................................... Forced air (self contained fans) Enters front and bottom
WEIGHT (approximate) .................................................. 1453 kg (2625 lb)
SIZE (WxHxD) (4 cabinets) ............................................ 272 x 158 x 160 cm (107 x 62 x 63 in) (See outline drawing #10023130)
