The Model 50WD1000 is a portable, self-contained, air-cooled, broadband, solid state amplifier designed for applications where extensive bandwidth and high gain are required. Push-pull circuitry is utilized in all of the high power stages in the interest of lowering distortion and improving stability. The Model 50WD1000 covers the frequency range from D.C. to 1000MHz in two bands. The low band covers from DC to 0.5MHz. The high band covers from 0.5MHz to 1000MHz. These bands can be selected automatically, manually or by remote control through the remote connector. The 50WD1000, when used with an RF sweep generator, will provide a minimum of 50 watts of swept power. Provisions are included for the remote control of the basic operating functions of the amplifier. Computer control can be accomplished using our CP2001 or CP3000 accessories.
SPECIFICATIONS, MODEL 50WD1000

RATED OUTPUT POWER ............................................... 50 watts minimum

INPUT FOR RATED OUTPUT .......................................... 1.0 milliwatt maximum

POWER OUTPUT @ 3dB COMPRESSION
 Nominal ................................................................. 60 watts
 Minimum .............................................................. 40 watts

POWER OUTPUT @ 1dB COMPRESSION
 Nominal ................................................................. 50 watts
 Minimum .............................................................. 30 watts

FLATNESS .................................................................. ±1.0 dB typical
 © 1.5 dB maximum

FREQUENCY RESPONSE ............................................... DC-1000 MHz
(In two bands selected automatically or manually)

GAIN ................................................................. 47 dB minimum

INPUT IMPEDANCE....................................................... 50 ohms, VSWR 2.0:1 maximum

OUTPUT IMPEDANCE ................................................... 50 ohms, nominal

MISMATCH TOLERANCE* ............................................. 100% of rated output power. Will operate without damage or oscillation with any magnitude and phase of source and load impedance.
 © See Application Note #27

MODULATION CAPABILITY........................................... Will faithfully reproduce AM, FM, or pulse modulation appearing on the input signal.

HARMONIC DISTORTION .............................................. Minus 20 dBc maximum at 35 watts

THIRD ORDER INTERCEPT POINT ................................. 56 dBm typical

PRIMARY POWER (selected automatically) ....................... 90 to 132; 180 to 264 VAC
 © 50/60 Hz, single phase
 © 700 watts maximum

RF CONNECTORS ........................................................ See Model Configuration

REMOTE CONTROL ...................................................... 25 Pin Subminiature D on rear panel

COOLING ............................................................. Forced air (self contained fans)
