California Instruments FCS Series II

Overview

- **High Performance**
  135/270 V, 156/312 V, or 200/400 V

- **Easy to Program**
  Uses front panel keyboard display with full decimal keypad for data entry

- **Single or Three Phase Operation**
  Ideally suited for avionics and defense applications

- **Arbitrary Waveform Capability**
  Test products for harmonics susceptibility

- **Power Analyzer**
  Performs voltage and load current harmonic analysis and waveform acquisition

- **Features multiple Connectivity**
  Connects via RS232, USB, and GBIB - remote control interface for ATE system integration included

Integrated System

The FCS Series II AC Power system is one of the most powerful systems in the industry, supporting high power levels with ease, at a reduced cost. The FCS Series II combines a flexible AC power source with a harmonic power analyzer that is capable of handling the most complex applications.

The FCS Series II uses a state-of-the-art Digital Signal Processor in conjunction with precision A/D converters. This provides more accuracy and resolution for test applications then is found in most dedicated harmonic power analyzers.

This system integrates digital multimeters, power harmonics analyzer, and current shunts, eliminating the need for multiple instruments; thus reducing cost and providing more flexibility than can be found with competing products.

Easy To Use Controls

The FCS Series II is microprocessor controlled and is operated using the front panel keypad that makes precise entries simple, and our powerful Instrument Control Software (GUI) which offers an even higher level of programability. An analog control allows output voltage and frequency to be slewed up or down dynamically. The control employs a dynamic rate change algorithm that combines the benefits of precise control over small parameter changes with quick sweeps through the entire range.

Applications

With precise output regulation and accuracy, high load drive current, multi or single phase mode, and built-in power analyzer measurement capabilities, the FCS Series II Power System addresses many application areas for AC power testing. Additional features like line arbitrary waveform generation, DO 160, MIL 704, and Airbus test standards make the FCS Series II a great choice for avionics and defense applications.

FCS Series II - Measurement and Analysis

Standard Waveforms

The FCS Series II Series provides three standard waveforms that are always available for output. The standard waveforms are:

- Sinewave for normal AC applications.
- Squarewave for special applications.
- Clipped Sinewave - Simulates THD levels to test for harmonic distortion susceptibility.

In addition to these standard waveforms, user defined waveform can be downloaded over the bus.

Harmonic Waveform Generation

Using the latest DSP technology, the FCS Series II Series controller is capable of generating harmonic waveforms to test for harmonics susceptibility of a unit under test. The Instrument Control Software can be used to define harmonic waveforms by specifying amplitude and phase for up to 50 harmonics. The waveform data points are generated and downloaded by the Instrument Control Software to the AC source through either the Remote Interface bus and remain in nonvolatile memory. Up to 50 waveforms can be stored and given a user defined name for easy recall. The three phase FCS Series II configuration offers independent waveform generation on each phase allowing three phase anomalies to be programmed and also allows simulation of unbalanced line conditions.

**FCS Series II**

**Arbitrary Waveform Generation**
Using the provided Instrument Control Software, the user also has the ability to define arbitrary AC waveforms. The arbitrary waveform method of data entry provides an alternative method of specifying AC anomalies by providing specific waveform data points. The Instrument Control Software includes a catalog of custom waveforms. Arbitrary waveform capability is a flexible way of simulating the effect of real-world AC power line conditions in both engineering and production environments.

**FCS Series II Series - Configuration Options**

**AC Transient Generation**
The FCS Series II controllers have a powerful AC transient generation system that allows complex sequences of voltage, frequency and waveshapes to be generated. This further enhances the capability to simulate AC line conditions or disturbances. When combined with the multi phase arbitrary waveform capabilities, the AC output possibilities are truly exceptional. In three phase system configurations, transient generation is controlled independently yet time synchronized on all three phases. Accurate phase angle control and synchronized transient list execution provide unparalleled accuracy in positioning AC output events.

Transient programming is easily accomplished from the front panel or software where clearly laid out menu's guide the user through the transient definition process. This feature allows for transient execution, Start, Stop, Abort and Resume operations.

User defined transient sequences can be saved to nonvolatile memory on on the PC for instant recall and execution at a later time. The included GUI supports transient definitions using a spreadsheet-like data entry grid. A library of frequently used transient programs can be created on disk.

The FCS Series II measurement system is based on real-time digitization of the voltage and current waveforms using a 4K sample buffer. The digitized waveform data is processed by a Digital Signal Processor to extract conventional load values such as rms voltage, rms current, real and apparent power. The same data is used to perform Fast Fourier Transformation (FFT) to extract the harmonic amplitude and phase angle of 50 harmonics.

**Standard Waveforms**
The following standard measurements are available from the front panel or via the bus:

- Frequency and Phase
- Voltage (rms)
- Current(rms) and Peak Current
- Crest Factor
- Neutral Current (rms)
- Real Power and Apparent Power
- Power Factor
FCS Series II

Advanced Measurement Functions
In addition to standard load parameters, the FCS Series II is capable of measuring voltage and current amplitude and phase harmonics up to the 50th harmonic (for fundamental frequencies up to 250 Hz). Total harmonic distortion of both voltage and current is also available.

Harmonic analysis data can be displayed on the front panel display or on the PC using the GUI program. The GUI can be used to save and print harmonics data in tabular, bar graph or time domain formats.

The acquired voltage and current time-domain waveforms for each output phase can be displayed using the GUI program. Waveform displays on the PC include voltage and current combined, three phase voltage, three phase current and true power. The time-domain data is available for transfer to the AC through IEEE-488, USB, RS232C, or Ethernet (option) when using custom software.

Diagnostics Capability
The AC Source can perform a self test and report any errors. The self test will run until the first error is encountered and terminate. The response to the self test query command will either be the first error encountered or 0 if no error was found. (Self test passed).

Instrument Control Software
Windows® Instrument Control Software is included with the FCS Series II. This software provides easy access to the power source’s capabilities without the need to develop any custom code. The following functions are available:

- Steady state output control (all parameters)
- Create, run, save, reload & print transient programs
- Generate & save harmonic waveforms
- Generate & save arbitrary waveforms
- Measure & log standard measurements
- Capture & display output voltage & current waveforms
- Measure, display, print & log harmonic voltage & current measurements
- Display bus traffic to & from the AC Source to help you develop your own test programs

1. Requires PC running Windows Vista™, Windows XP™, or Windows 2000™

</tbody>
</table>

- Note: Constant power mode on the FCS Series II provides increased current at reduced voltage.

### Current Limit
- Programmable from 0 Amps to maximum current for selected range

### Peak Current

### Output Noise
- 100mV rms typ. (20 kHz to 1 MHz)

### Harmonic Distortion
- < 1% (at full scale voltage, full resistive load)

### Isolation Voltage
- 300 V rms output to chassis

### Output Relay
- Push button controlled and bus controlled output relay

## Input

<table>
<thead>
<tr>
<th>Line Voltage/Current (rms per phase)</th>
<th>208 VAC (STD)</th>
<th>240 VAC (OPT)</th>
<th>380 VAC (OPT)</th>
<th>415 VAC (OPT)</th>
<th>480 VAC (OPT)</th>

<td>IEC1010, EN50081-2, EN50082-2, CE, EMC, and safety mark requirements / RFI Suppression: CISPR 11, Group 1, Class A</td>
</tr>
</tbody>
</table>

Note: Specifications are subject to change without notice. Specifications are warranted over an ambient temperature range of 25°± 5° C. Unless otherwise noted, specifications are per phase for a sine wave with a resistive load and apply after a 30 minute warm-up period. For three phase configurations, all specifications are for L-N. Phase angle specifications are valid under balanced load conditions only.
FCS Series II: Specifications

**Remote Control**

- **IEEE-488 Interface**: IEEE-488 (GPIB) talker listener. Subset: AH1, C0, DC1, DT1, L3, PP0, RL2, SH1, SR1, T6, IEEE-488.2 SCPI Syntax
- **USB Interface & Optional Ethernet**: Version: USB 1.1; Speed: 460 Kb/s maximum
- **Ethernet Interface (Optional)**: Specify -LAN option. 10BaseT, 100BaseT, RJ45

**Physical Dimensions**

- **Dimensions (per chassis)**: Height: 45" (114.3 cm), Width: 30" (76.2 cm), Depth: 36" (+ 4" for J-box) = 40" (101.6 cm) (For /2 or /3 models multiply height by 2/3)
- **Weight**: Chassis: Net: 900 lbs / 87.7 Kg, Shipping: 1100 lbs / 127.3 Kg (for /2 or /3 model configurations multiply number of chassis).
- **Vibration and Shock**: Designed to meet NSTA project 1A transportation level
- **Air Intake/Exhaust**: Forced air cooling, front to rear air intake, rear exhaust, variable fan speed
- **Temperature**: Operating: 0 to 35° C, full power / Storage: -40 to +85° C
- **Diagnostics**: Built-in self test available over bus (*TST)

**Rear Panel Connectors**

**Option -ADV Specifications**

### Model

Refer to table shown for model numbers and configurations. Specify number of output phases (-1 or -3) as part of model number.

### Supplied with

- User / Programming Manual on CD-ROM,
- Software and RS232C serial cable.

### Output Options

- **AX** Auxiliary outputs, 26 VAC, 5 VAC.
  - Limits upper frequency to 800 Hz.
- **HV** 156/312 V output range.
- **EHV** 200/400 V output range.
- **HF** Extends upper frequency limit.
  - See HF table.
- **LF** Limits output frequency to 500 Hz.

### Controller Options

- **160** RTCA/DD-160D, Change 2,
  - EuroCAE-14D
  - [Section 16, AC only. Refer to -160 option data sheet for details]
- **704** Mil-Std 704 rev D and E test firmware.
  - [AC only, Refer to -704 option data sheet for details]
- **704F** Mil Std 704 test firmware.
  - Revisions A-F.
- **ABD** Airbus Directive 0100.1.8 tests.
  - [AC only]. Requires -ADV and use of Windows PC and included FCS Series II Instrument Control software.
- **ADV** Advanced feature set.
  - Adds arbitrary waveform generation and harmonic analysis of voltage and current.
- **AMD** Airbus AMD24C Tests. Revision C.
- **ALM** Aircraft MIL-STD 704F Test Software
- **B787** Boeing 787B3-0147 Tests.
- **EXS** External Sync.
- **GPIB** GPIB interface and APE programming language.
- **LAN** Ethernet Interface.
- **MB** Multi-box.
  - Adds controller to auxiliary chassis of multi-chassis systems.
- **MODE** Adds phase mode selections for -3 models.
- **L22** Locking Knobs.
- **LKM1** Clock and Lock Master
- **LKS1,2** Clock and Lock Auxiliary
- **LNS2** Line Sync.
- **EXS2** External Sync.

### Cabinet Options

C prefix Cabinet System. Installed and pre-wired in 19” cabinet.
