CDNS

COUPLING / DECOUPLING NETWORKS ACCORDING TO IEC/EN 61000-4-6, IEC/EN 60945 AND CISPR 15/EN 55015

Immunity test to conducted disturbances, induced by radio-frequency fields according to the standards IEC/EN 61000-4-6 and IEC/EN 60945 introduce different types of coupling/decoupling networks according to the characteristics of the interconnection lines. Dedicated CDNs are also used as per CISPR 15 and EN 55015 for measurement of emission. A large range of appropriate coupling/decoupling networks as well as the necessary accessories for standard compliant levelling are available.

You’ll find an overview of all available CDN’s on the datasheet. Apart from the listed standard coupling/decoupling networks EM TEST also supply special or customised coupling/decoupling networks.
