EMCO's Model 5405 and 5407 GTEM!™ Cells enable users to perform radiated emissions and radiated immunity tests in less time than at either an OATS or in a chamber. Tests can be performed quickly and accurately throughout the product life cycle. Beginning with design qualification testing and moving through to pre-compliance testing, full compliance testing and production sampling, EMCO’s GTEM! cells are time-saving devices for your test lab. A typical radiated emissions test (10,000 point scan) can be completed in 15 minutes or less, while a typical radiated immunity test can usually be completed in half the normal time.

The GTEM! is based on experience, not experimentation. Originally developed in the EMC Baden (Switzerland) labs of ABB, the cell has been accepted in the EMC community for more than 10 years, and is field proven daily at more than 400 installations worldwide. Measurements made with a GTEM! are accepted for final compliance demonstration by the FCC for Part 15 & 18 radiated emissions testing, and comply with IEC 61000-4-3 Annex D for immunity testing.

The GTEM!™ cell with door placement on right side (viewed from feed)
- Mobile base with locking caster wheels
- Hydraulically damped door with recessed contact mechanism, contact RF sealing and shielded window
- Rantec high performance RF anechoic absorber
- Single phase, 20A, 50/60 Hz filter with choice of two floor mounted receptacles
- One wall mounted fiber optic feedthrough (4 lines)
- Three N connector feedthroughs

For a performance comparison of the GTEM!™ and several contemporary TEM devices, request a reprint of a paper by Dr. H. Garbe, University of Hannover, Field Homogeneity in Different TEM Waveguides.
RF Emissions/Immunity Test Cell

¹ Frequency range where OATS correlation demonstrated: 3-position algorithm 30 MHz - 5 GHz, 9-position algorithm 9 kHz - 5 GHz
² Low VSWR to f ≥ 20 GHz; subject to field uniformity tolerance
³ Characteristic frequency: resistor board/RF absorber crossover frequency
⁴ ≤ 8 dB Uniformity
⁵ At resistor board junction
⁶ Total EUT and personnel load distributed at maximum loading of 450 kg/m². Point loads less than 7 cm² should not exceed 20 kg/cm².

Options
- Custom Electrical Filters
- Custom Feedthrough Panels
- EUT XYZ Axis Positioning Device
- EUT Illumination
- Forced Ventilation
- High Power Configuration

Note: The 5405 is shipped fully assembled. Please note dimensions in the Physical Specifications table to ensure the unit will fit through your doorways. As standard, the 5407 is shipped partially assembled with instructions for installation. Doorways that are 218.5 cm (86 in) wide and 203.2 cm (80 in) high are needed for subassembly passage. If space limitations exist, the unit can be shipped unassembled. Contact EMCO sales department regarding requests to ship the unit unassembled and for supervision of installation.
